1. Screens Online Manual

1.1. Measurement View

1 Density relative

See chapter [1.1.2 Density Relative View](#)

2 Density absolute

See chapter [1.1.3 Density Absolute View](#)

3 Colorimetric

See chapter [1.1.4 ColoriMetric View](#)

4 BestMatch

See chapter [1.1.5 BestMatch View](#)

5 TVI curve

See chapter [1.1.6 Dotgain Curve View](#)

6 TVI patches

See chapter [1.1.6. Dotgain View](#)

7 Gray

See chapter [1.1.7. Gray View](#)

8 Overprint

See chapter [1.1.8. Overprint View](#)

9 Paper

See chapter [1.1.9. Paper View](#)

10 Go to Job-Setup view

See chapter [1.1.2. Job-Setup view](#)

11 Go to Navigation

Navigate from here to the job setup, reporting etc. pages
See chapter [1.1.1. Navigation area](#)

12 Go to Change Target Density

Click on the unit number and change target density
See chapter [1.1.2.1. Change target density for all keys](#)

13 Go to Colorbar view

See chapter [1.1.3. Colorbar view](#)

14 Go to Target-Setup view

See chapter [1.1.4. Target-Setup view](#)

15 Go to Scoring view

See chapter [1.1.5. Scoring view](#)

16 Go to job Measurement overview

See chapter [1.1.13. Job Measurement Overview](#)

17 Go to Mask ink key

See chapter [1.1.11. Mask ink key / unit](#)

18 Go to Job Status

See chapter [1.1.12. Job Status](#)

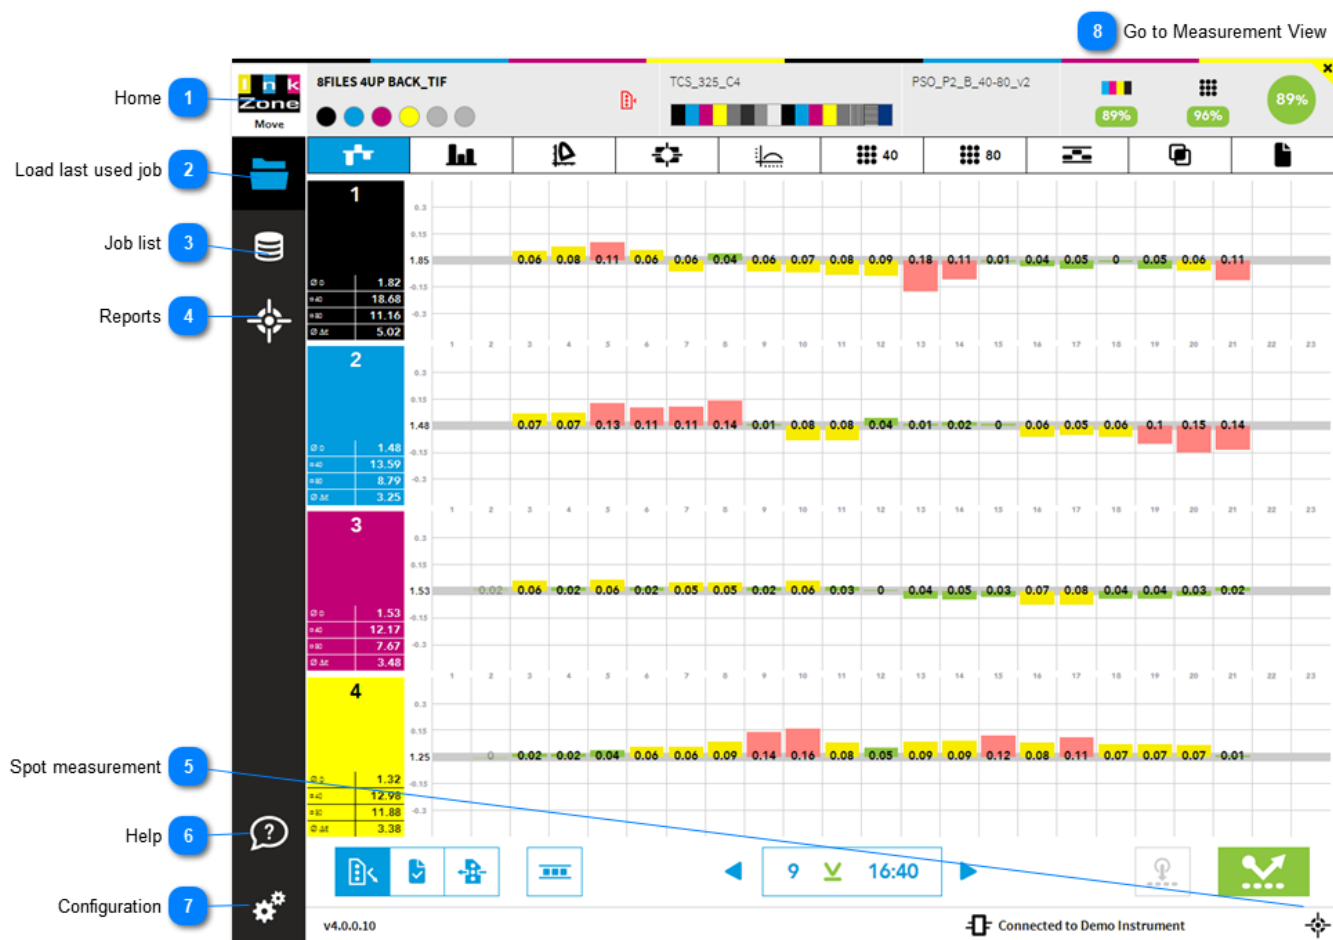

19 Measure and color-control

See chapter [1.1.15. Measure and Transfer Button](#)

20 Ink Key Patch View

See chapter [1.1.14. Ink-Key Patch View](#)

1.1.1. Navigation Bar

1 Home

Click on the logo to return to the home screen

2 Load last used job

Loads the last used job

3 Job list

Loads the job list

4 Reports

Displays the job reports

5

Spot measurement

Changes to the spot measurement window, see here [1.1.16. Spot Measurement](#)

6

Help

Context sensitive help button. Shows a help page for the currently active screen.

7

Configuration

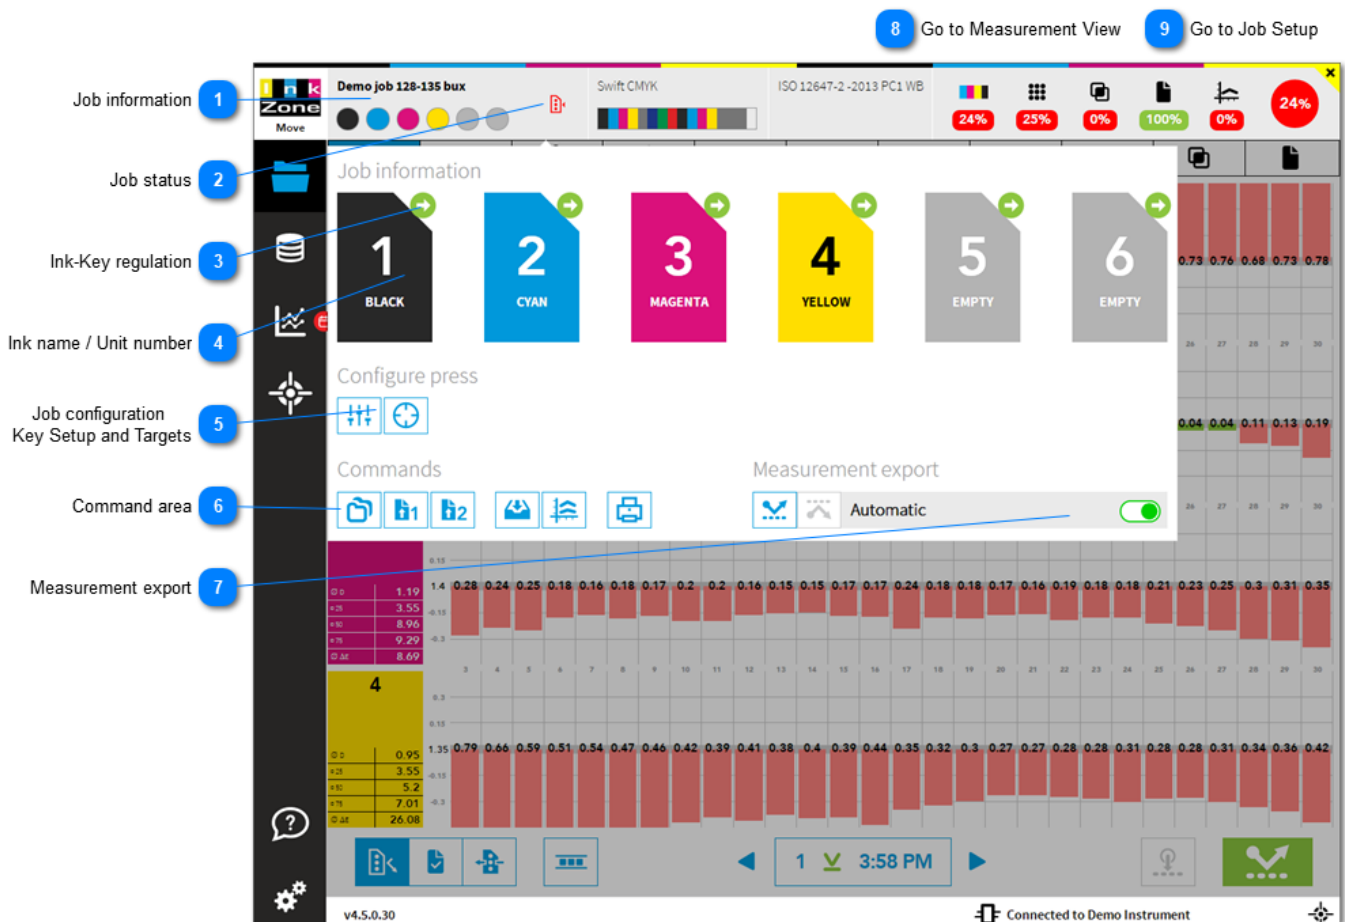

Opens up the software configuration page.

8

Go to Measurement View

[1.1. Measurement view](#)

1.1.1.1. Job Setup and Commands

1 Job information

A click here opens the setup information view from the current job.

2 Job status

Indicates job status as MakeReady / OK-Sheet / Production
Change job status, see here: [1.1.12. Job Status](#)

Status MakeReady

Status OK-Sheet / Production

3

Ink-Key regulation

In the job setup screen click on the unit to display the ink-key regulation modifier.
See here: [1.1.1.1.1. Ink-key Regulation modifier](#)

4

Ink name / Unit number

Displays the ink name and its unit number

5

Job configuration Key Setup and Targets

Select predefined ink-key groups.
See here: [1.1.2.4. Change Target Density with <Group Ink-Keys> feature](#)

-

Set color targets and ink-key mask from existing job, see here: [1.1.1.1.2. Targets from Existing Job](#)

-

6

Command area

Commands

Click on the logo to return to the home screen

Clone current job

Set current job setup as template nr. 1.
A job template reuses targetset, colorbar,
print sequence and machine setting

Set current job setup as template nr. 2.
A job template reuses targetset, colorbar,
print sequence and machine setting

Create an archive jobs in InkZonePerfect

Creates an ink-preset linearization job in
InkZonePerfect

7

Measurement export

Measurement export

Activate the automatic measurement data export such as SVF etc after every scan.

Data from units before perfector

Data from units after perfector

See setup here: [1.2.8. Data Export Setup](#)

8

Go to Measurement View

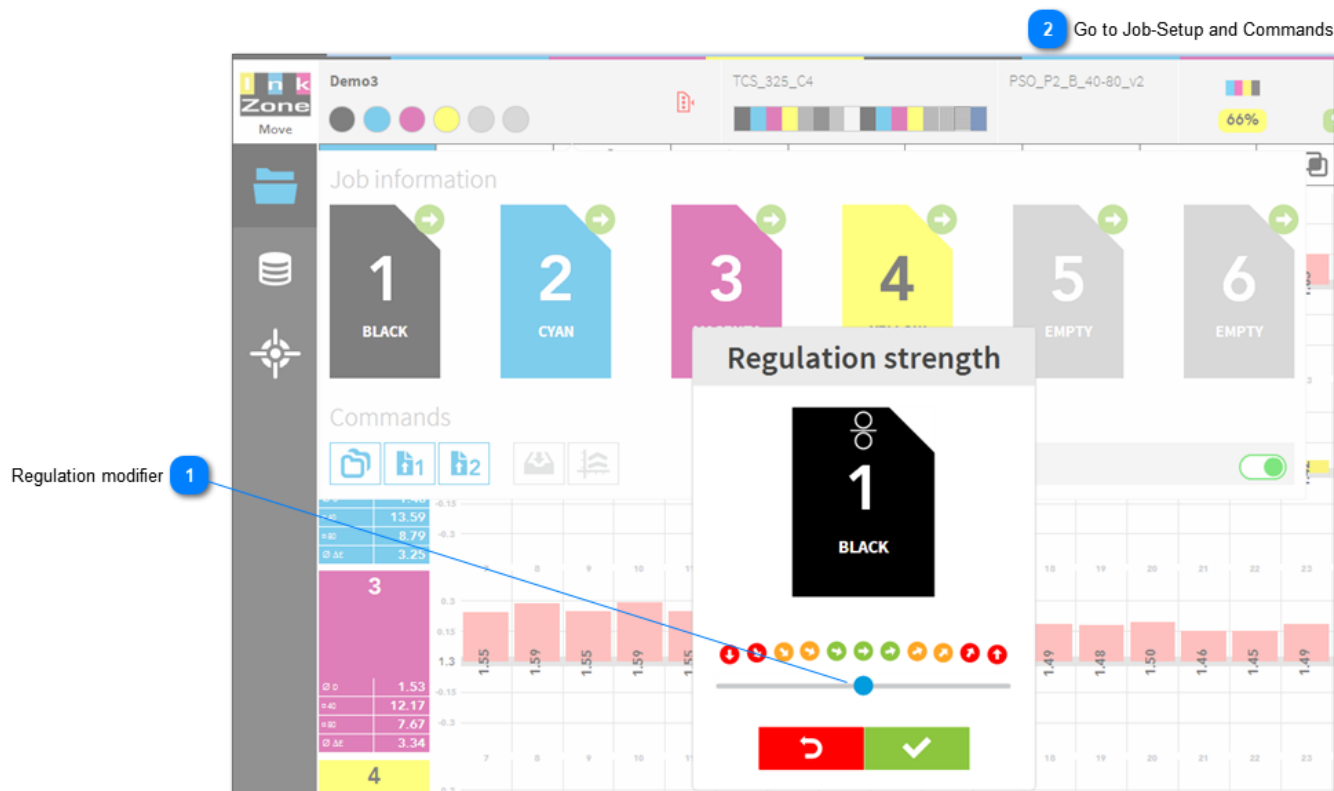

[1.1. Measurement view](#)

Go to Job Setup

[1.3.2. New Job](#)

1.1.1.1.1. Ink-key Regulation Modifier

1

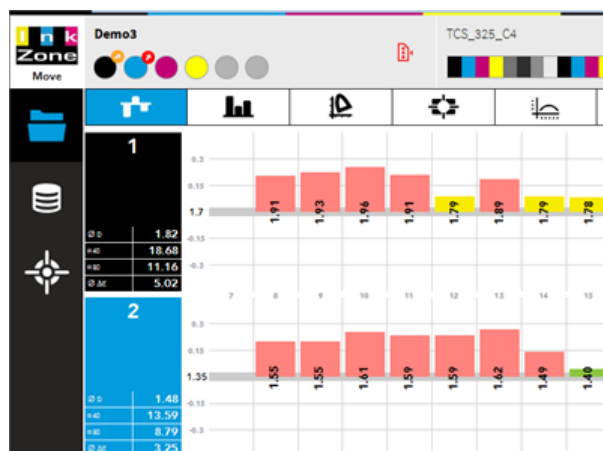

Regulation modifier

Change the regulation strength in 5 steps for increase or decrease the strength.

The selected level is indicated in the measurement view top left corner.

In the screenshot below the units for black and cyan were changed for stronger regulation.

2

Go to Job-Setup and Commands

[1.1.1.1. Job Setup Information](#)

1.1.1.1.2. Reuse targets from existing Job

8 Go to Job Setup and Commands

Select targets from existing job

Search job 1

Job list 2

Select job 3

Current setting 4

From selected job 5

Target density 6

Ink-key mask 7

Target	1.8	Target	1.4	Target	1.4	Target	1.3	Target	0	Target	0
New	1.7	New	1.4	New	1.3	New	1.2				
Ink-key mask		Ink-key mask		Ink-key mask		Ink-key mask		N/A		N/A	

1

Search job

Search here for the job from which the targets should be used

2

Job list

votel europe

1/12/18
4:22 PM

Job list with all matching jobs to the search criteria

3

Select job

1/12/18
4:22 PM

Select the job with the green button

4

Current setting

Target	1.8
--------	-----

Current target density

5

From selected job

New	1.7
-----	-----

Target density from selected job

6

Target density

Enable new target density for this unit

7

Ink-key mask

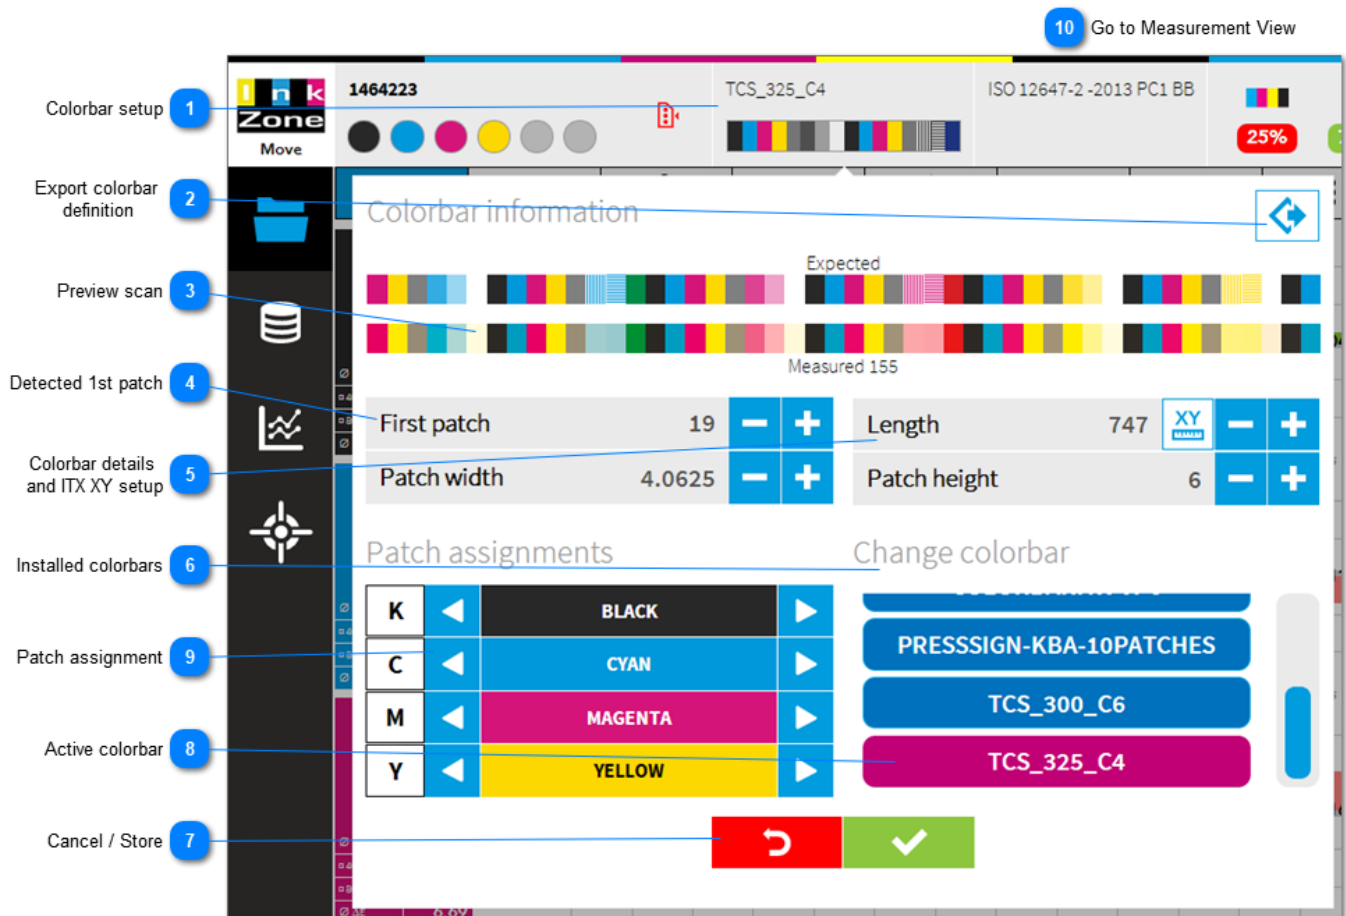

Enable ink-key mask for this unit

8

Go to Job Setup and Commands

[1.1.1.1. Job Setup Information](#)

1.1.1.2. Colorbar View

1 Colorbar setup

Click in the colorbar area for detailed information on the measured colorbar and to change the setup.

2 Export colorbar definition

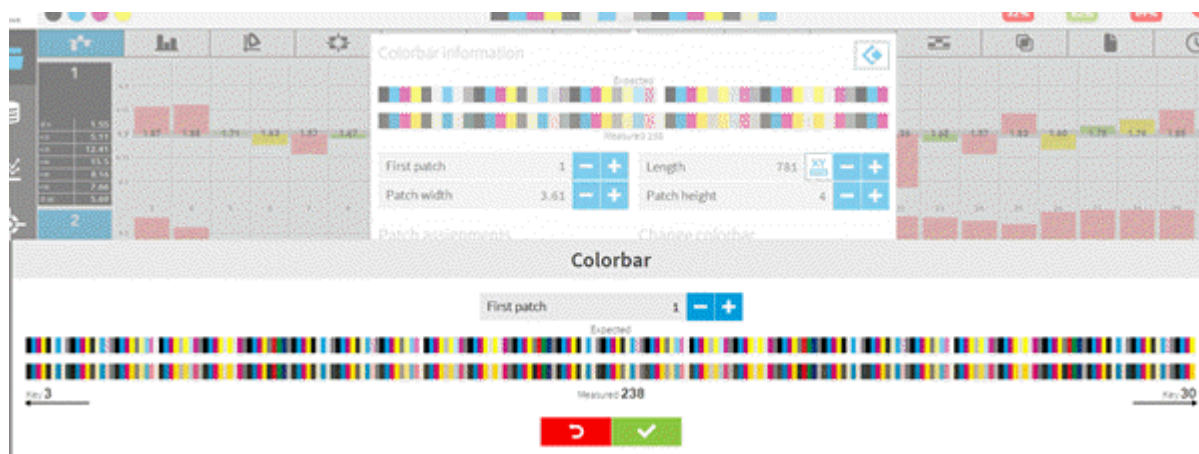

Export the current selected colorbar as a colorbar definition file CBF.

3 Preview scan

Top colorbar shows the colorbar definition, the expected. The colorbar below displays the patch data received from the scanning device.

Click on **Measured** colorbar to preview expected versus measured colorbar:

4

Detected 1st patch

First patch 19 - +

Indicates the number of the first patch from the colorbar definition data. The first patch can be looked when using the IntelliTrax or EasyTrax.

5

Colorbar details and ITX XY setup

Length 747 XY - +

Indicates the length in mm. Use the XY button to setup the XY parameter for IntelliTrax, see here: [1.1.1.2.1. IntelliTrax XY coordinates](#). Sample setup [1.1.1.2.2. IntelliTrax XY sample](#)

6

Installed colorbars

Change colorbar

Shows all colorbars within InkZoneMove

7

Cancel / Store

Accept or discard changes

8

Active colorbar

TCS_325_C4

Currently selected colorbar

9

Patch assignment

Patch assignments

K	◀	BLACK	▶
C	◀	CYAN	▶
M	◀	MAGENTA	▶
Y	◀	YELLOW	▶

Printed color to colorbar patch assignment. Change with left and right arrow.

10

Go to Measurement View[1.1. Measurement View](#)

1.1.1.2.1. IntelliTrax XY coordinates

1

Paper stops

Align the job sheet to the paper stop when using XY measurement.

2

Instrument head

IntelliTrax head in idle position.

3

Y axis origin

Y axis, starts from paper stop, vertical.

4

X axis origin

X axis, in instrument head movement direction, horizontal.

5

Return to Colorbar View

[1.1.1.2. Colorbar View](#)

6

Go to XY ITX sample

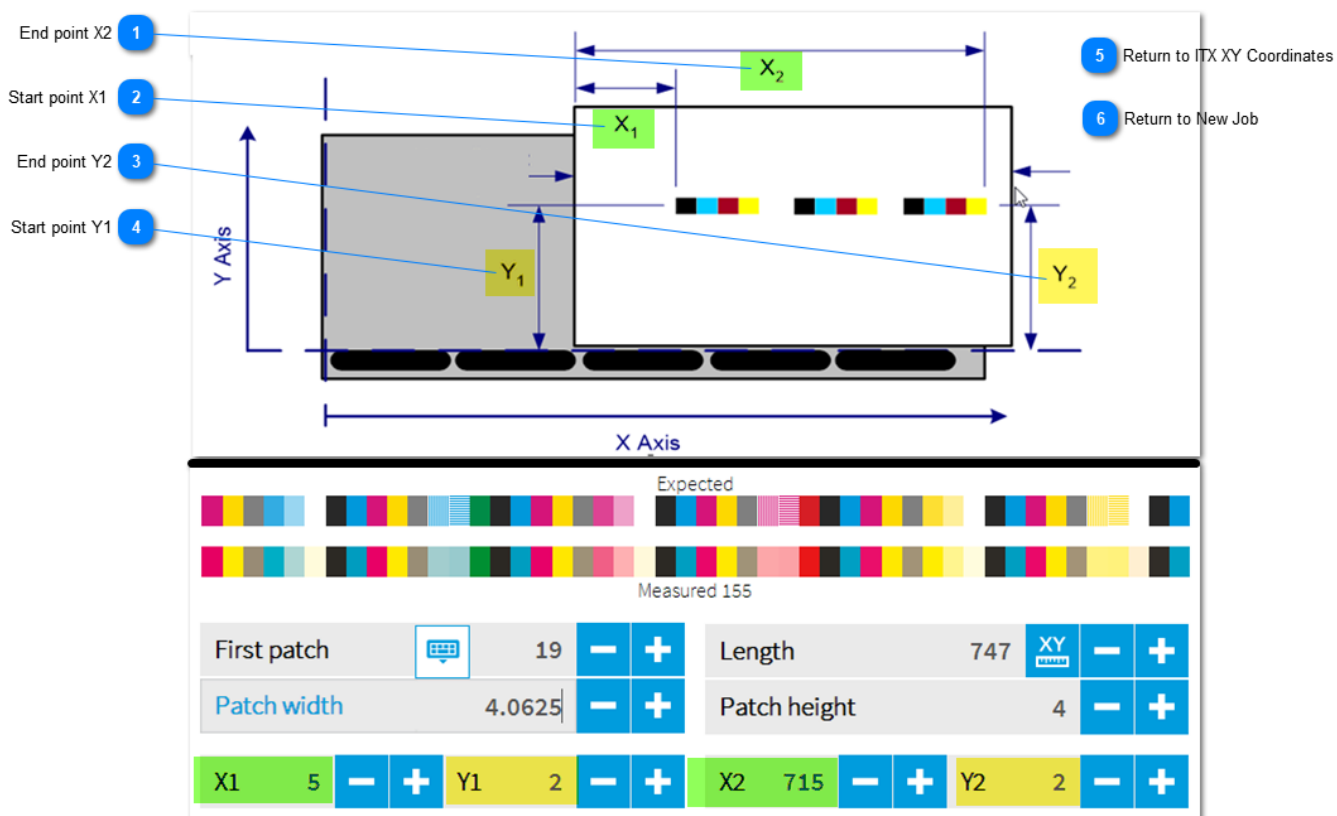

[1.1.1.2.2. IntelliTrax XY sample](#)

7

Go to New Job

[1.3.2. New Job](#)

1.1.1.2.2. IntelliTrax XY sample

1

End point X2

X_2 is the distance from the near sheet edge to the **end** of the color patch.

2

Start point X1

X_1 is the distance from the near sheet edge to the **beginning** of the color bar.

3

End point Y2

Y_2 is the distance from the paper stop to the **center** of the last color patch.

4

Start point Y1

Y_1 is the distance from the paper stop to the **center** of the color bar.

5

Return to ITX XY Coordinates

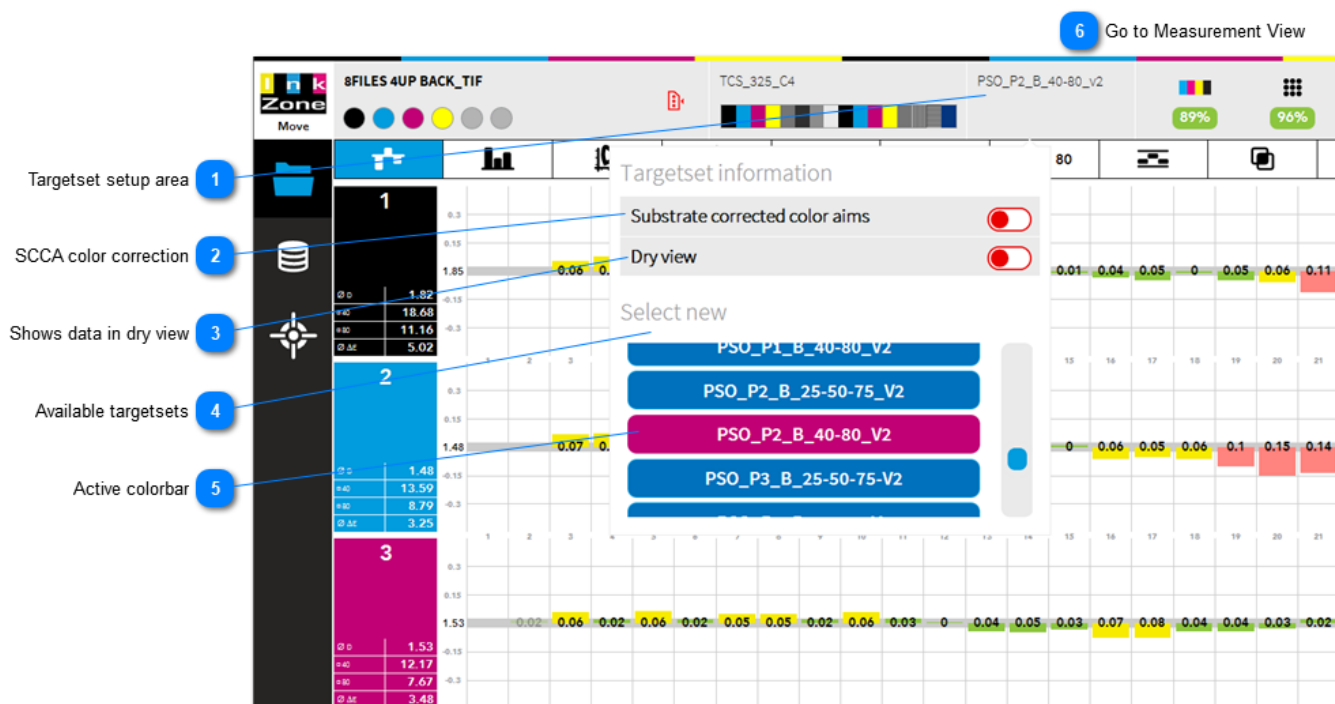

[1.1.1.2.1. IntelliTrax XY coordinates](#)

6

Return to New Job

[1.3.2. New Job](#)

1.1.1.3. Target-Setup View

1

Targetset setup area

Currently selected targetset

2

SCCA color correction

Activate SCCA, **Substrate Corrected Colorimetric Aims**. Corrects the Lab target of solids to match proof and press sheet when the printing substrate to be used has a color that differs from that of the reference printing.

3

Shows data in dry view

Displays the measurement data in dry view. Works with any targetset with a wet-dry definition.

4

Available targetsets

List with all defined targetset within IZMove. Color differences and scoring is recalculated after targetset change.

5

Active colorbar

PSO_P2_B_40-80_V2

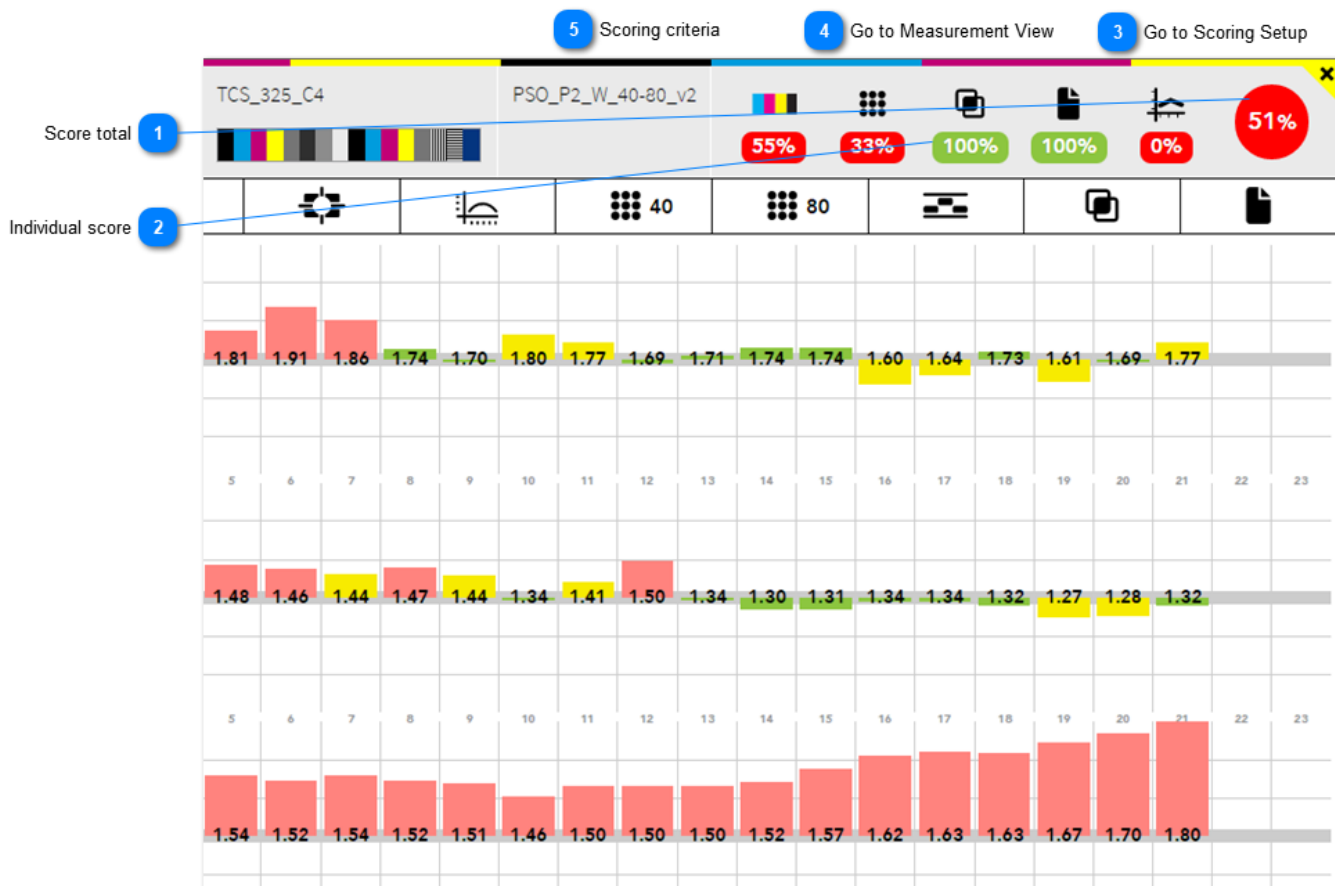

Currently selected targetset.

6

Go to Measurement View

[1.1. Measurement View](#)

1.1.1.4. Scoring View

1

Score total

Shows total score from the current sheet.

2

Individual score

Shows separate scores for every criterion.
See all criteria here: [1.2.5.3. Scoring Criteria](#)

3

Go to Scoring Setup

[1.2.5. Scoring Setup](#)

4

Go to Measurement View

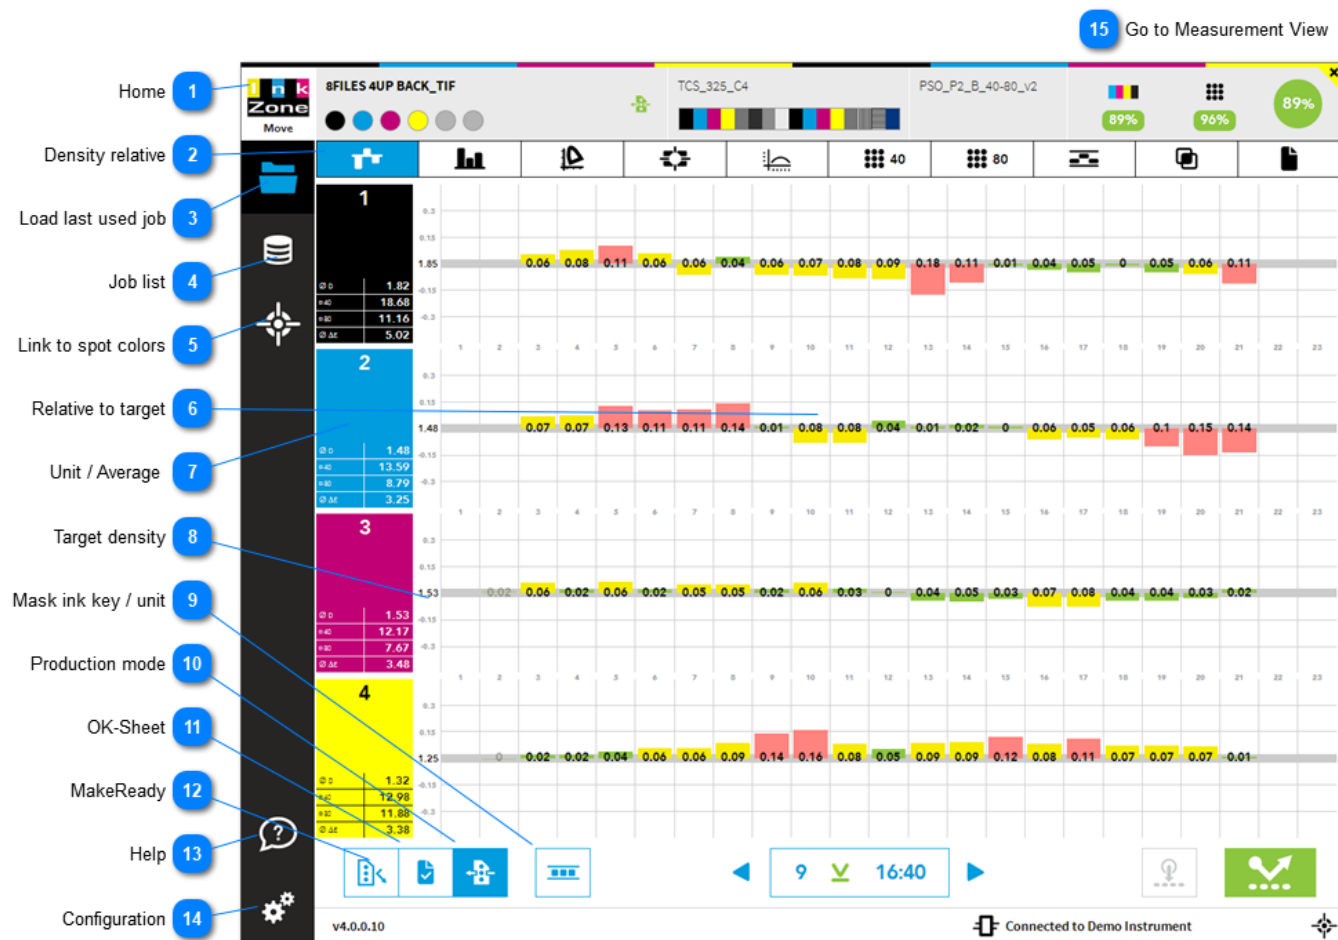

[1.1. Measurement View](#)

5

Scoring criteria

[1.2.5.3. Scoring Criteria](#)

1.1.2. Density Relative View

1 Home

Click on it to return to the home screen

2 Density relative

Displays the density relative view

3 Load last used job

Loads the last used job

4 Job list

Loads the job list

5 Link to spot colors

Changes to the spot color setup.
See [1.2.4. Spotcolor Setup](#)

6 Relative to target

Shows measured density relative to target, like:
Target density 1.35
Measured density 1.40
Displayed value 0.05

7 Unit / Average

Shows average values.

Average values on:

Density
TVI on 40% patches
TVI on 80% patches
DeltaE

8 Target density

Shows currently used target density for the print unit.
Target density is changed by clicking on the unit number.
Then use the plus and minus button for the change.

Or simply type the new target with your keyboard.
See details here: [1.1.1.1. Change target density](#)

9

Mask ink key / unit

Select ink key/s or unit/s which are not regulated with color control.
These key/s are also ignored by the report system.

See here [1.1.10. Mask ink key / unit](#)

10

Production mode

Change to production mode.

IZReport uses only sheets which are marked as "Production" for the production report.

11

OK-Sheet

Sets the currently displayed sheet as an OK-sheet.

The averaged Lab value becomes the new Lab target.

The DeltaE values are recalculated when applying the OK-sheet to a previously scanned sheet.

12

MakeReady

Every new job is initially as MakeReady. Change to OK-sheet or Production mode.

IZReport ignores all MakeReady sheets when a production report is generated.

13

Help

Context sensitive help button. Shows the help page for the currently active screen

14

Configuration

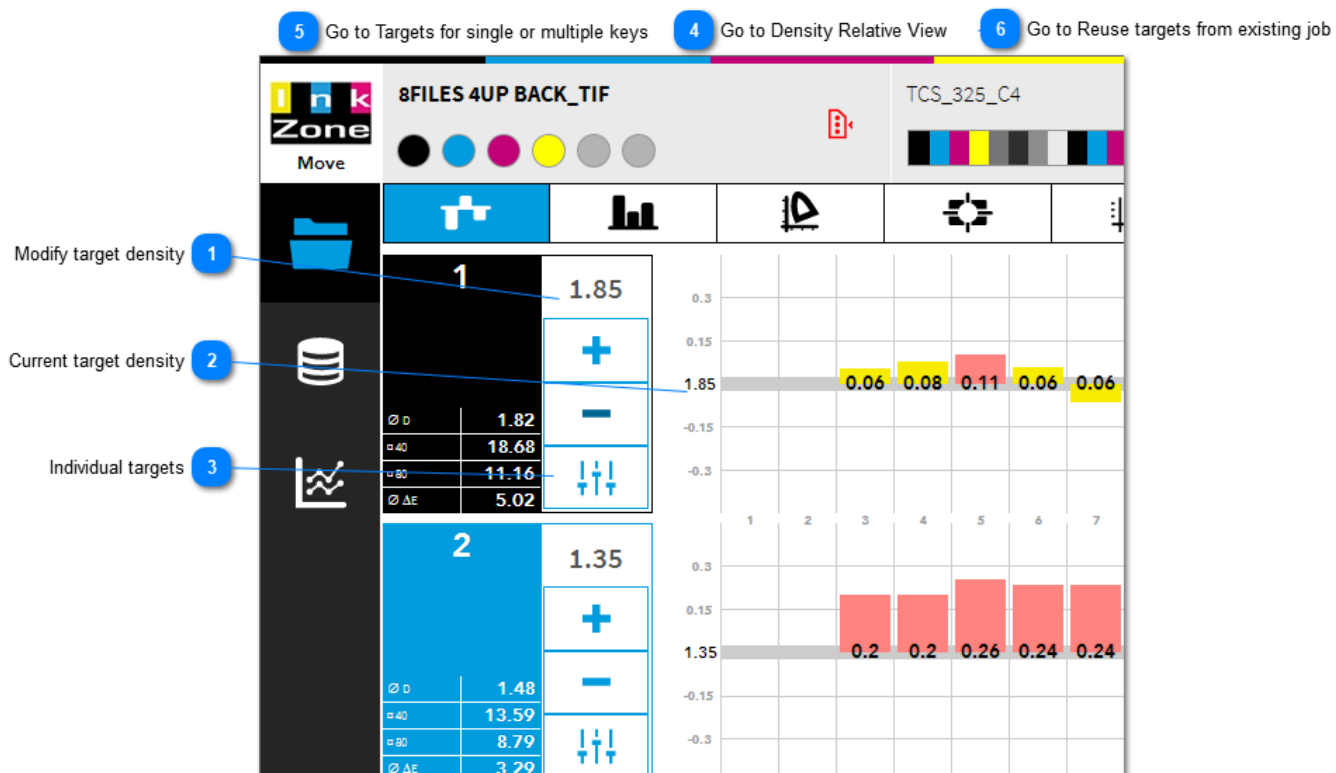

Open up the software configuration page

15

Go to Measurement View

[1.1.1. Measurement view](#)

1.1.2.1. Target Density

1

Modify target density

1.85

+

-

Change target density for all ink keys with the +/- buttons

2

Current target density

Indicates the current target density (1.85) with the tolerance area in grey.
Targets and tolerances are set here: [1.2.3. Targetset & Print Tolerance Setup](#)

3

Individual targets

Change to the individual target density setup.
See details here: [1.1.1.2. Change target density for individual keys](#)

4

Go to Density Relative View

[1.1.2. Density Relative View](#)

5

Go to Targets for single or multiple keys

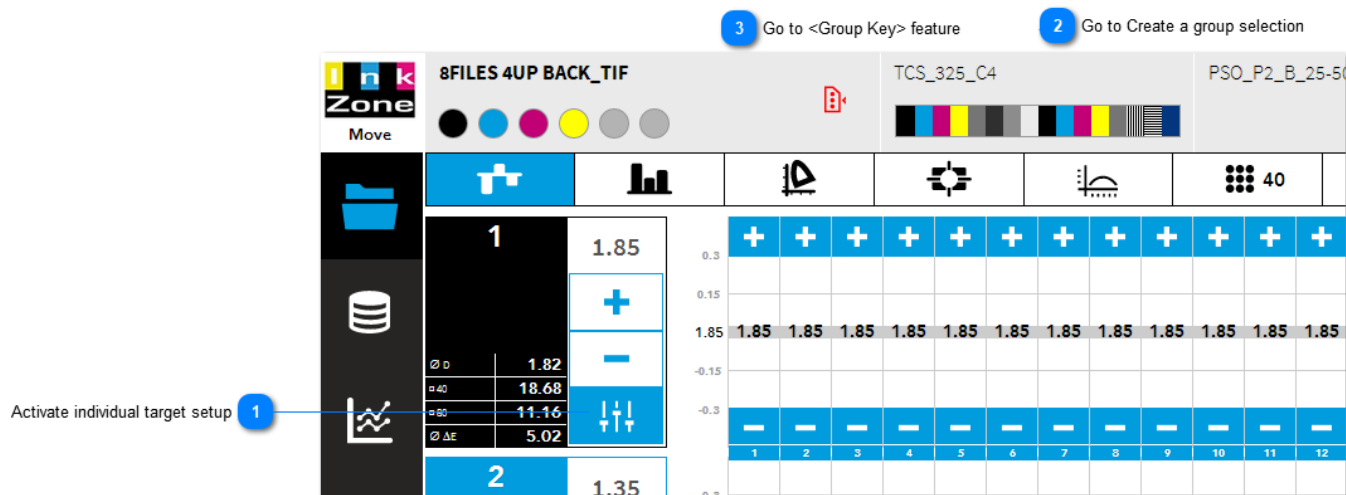

[1.1.2.2. Change Target Density for Single or Grouped Keys](#)

6

Go to Reuse targets from existing job

[1.1.1.1.2. Reuse targets from existing Job](#)

1.1.2.2. Change Target Density for Single or Grouped Keys

1

Activate individual target setup

Set individual target densities for every ink key. Press the plus minus buttons from the key to change targets.

With an ink key group selection several ink keys are changed at once.

See also the feature ink-key groups: [1.1.2.4. Change Target Density with Group Ink-Keys feature](#)

2

Go to Create a group selection

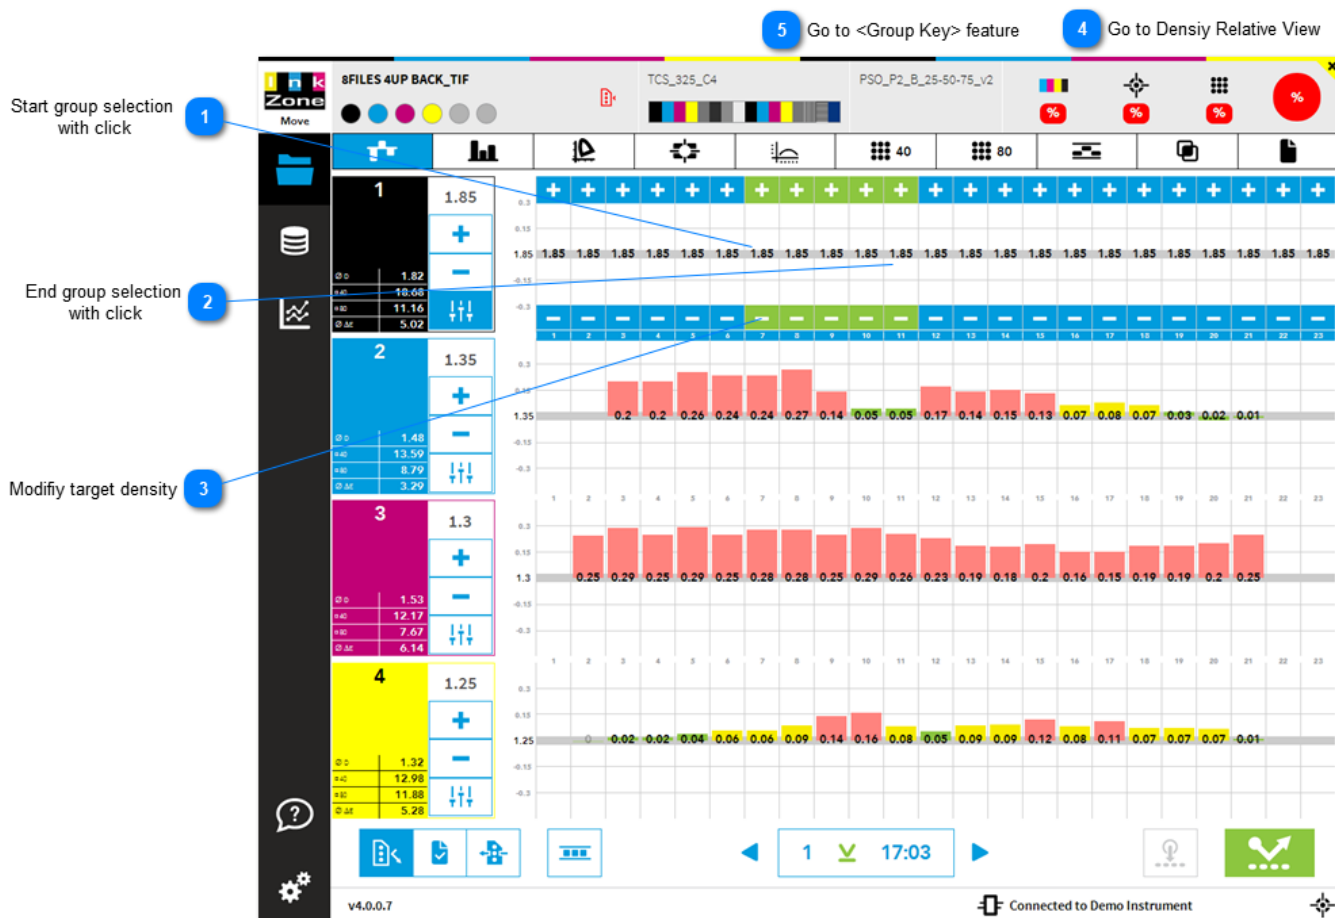

[1.1.2.3. Group Selection](#)

3

Go to <Group Key> feature

[1.1.2.4. Change Target Density with <Group Ink-Keys> feature](#)

1.1.2.3. Key Group Selection

1 Start group selection with click

Click on the first key from an ink-key group. The key start to blink.

2 End group selection with click

After selecting the last ink-key, an ink-key group is selected and is indicated by a green overlay on the plus and minus buttons.

3

Modify target density

Change the target density with the plus and minus button

4

Go to Density Relative View

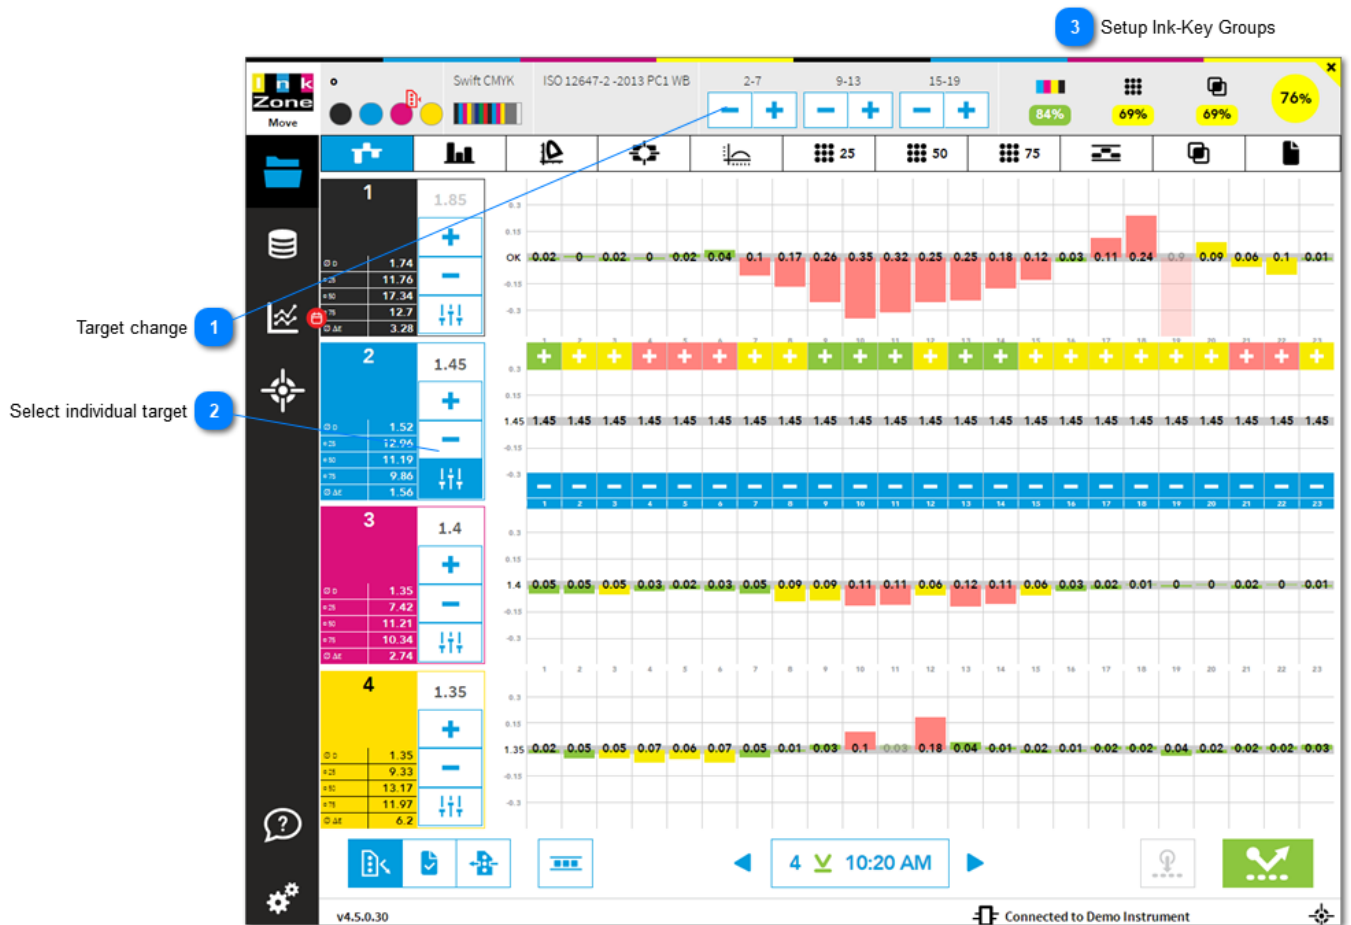

[1.1.1. Density Relative View](#)

5

Go to <Group Key> feature

[1.1.2.4. Change Target Density with <Group Ink-Keys> feature](#)

1.1.2.4. Change Target Density with <Group Ink-Keys> feature

1 Target change

Change through the plus or minus button the group's ink-keys.

2 Select individual target

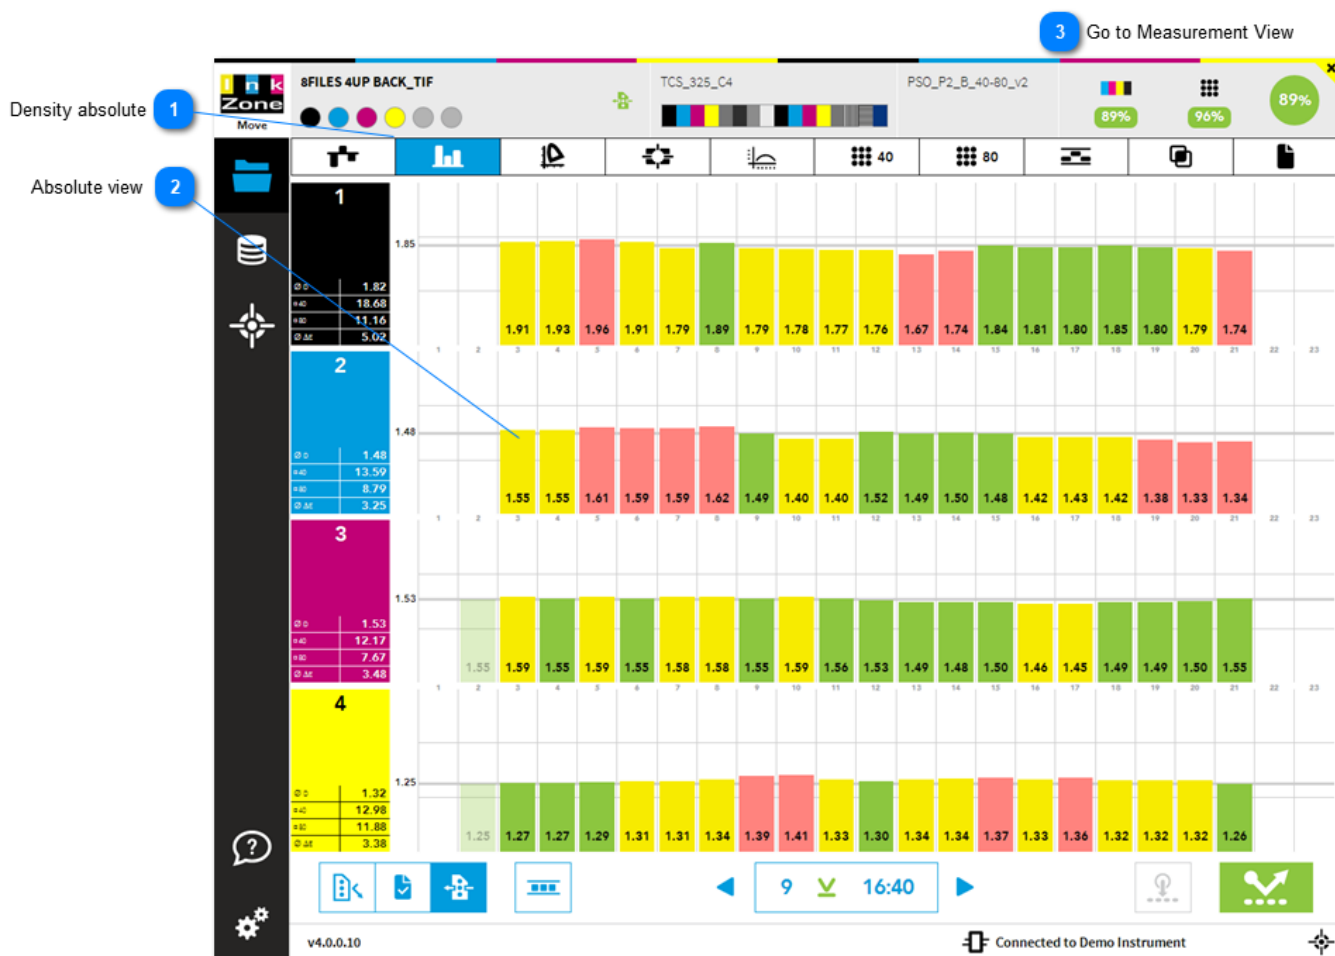

Select the icon individual density target and apply target density changes to a range of keys through the +/- buttons from (1)

Note: it's possible to select more than one unit

3 Setup Ink-Key Groups

To setup ink-key groups see here: [1.2.1.5. Ink-Key Groups](#)

1.1.3. Density Absolute View

1

Density absolute

Displays the density relative view

2

Absolute view

Shows measured density in absolute numbers

3

Go to Measurement View

[1.1. Measurement view](#)

4 Go to Measurement View

DeltaE 2

Lab information 3

1

3

Shows Lab target and average DeltaE

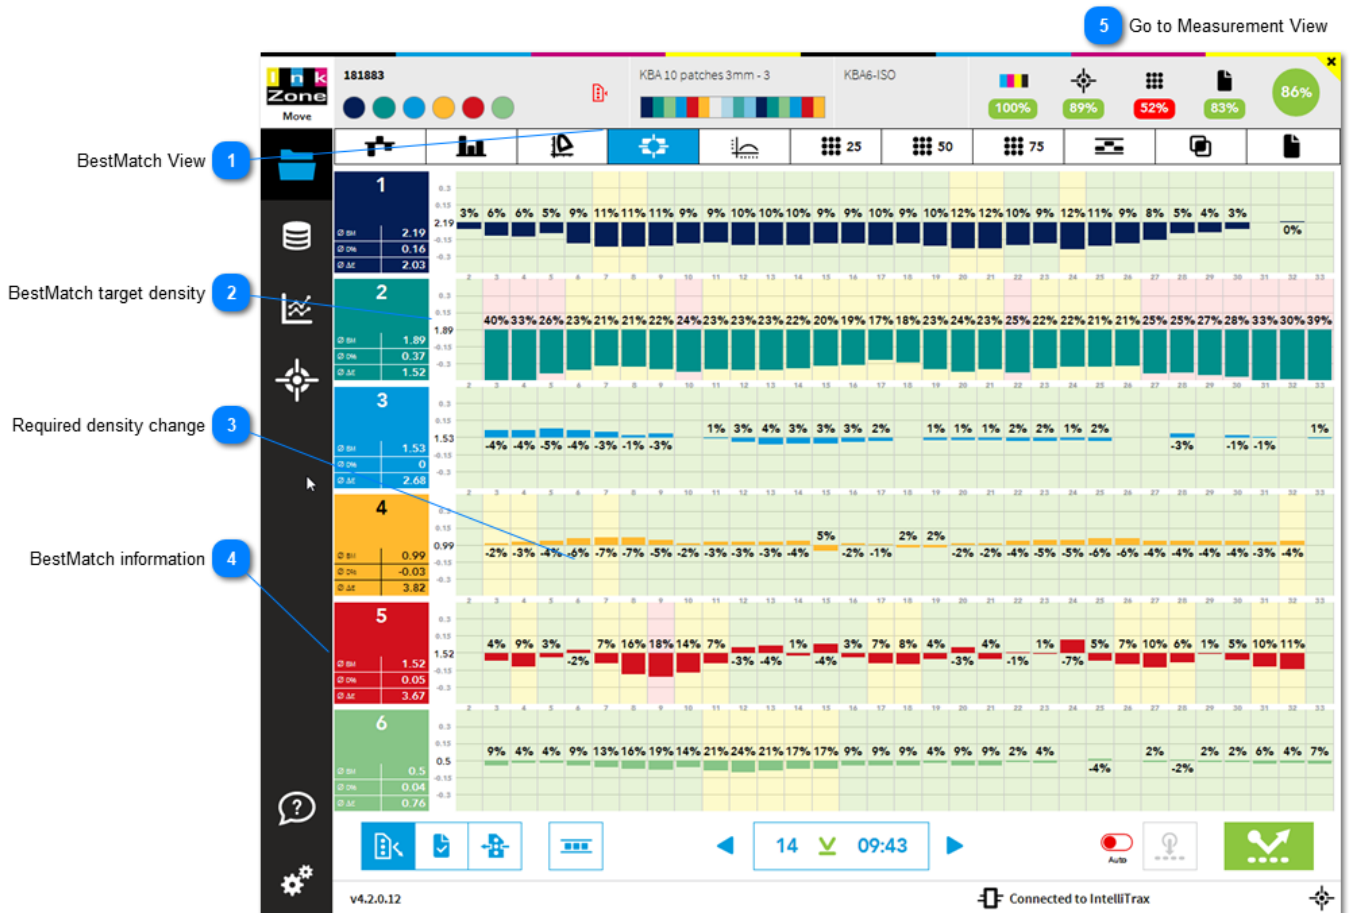

Go to Measurement View

[1.1. Measurement view](#)

1.1.5. BestMatch View

Click on the unit number to enable BestMatch target for printing.

1 BestMatch View

Displays BestMatch information with green, yellow and red background for every key.

Background indicator:

- 1) Green = color is okay and within DeltaE defined by the targetset
- 2) Yellow = color is at the edge of the tolerance
- 3) Red = out of tolerance

2

BestMatch target density

Ø BM	1.89	0.13
Ø D%	0.37	1.09
Ø ΔE	1.52	-0.13

Shows current BestMatch target. In this sample 1.89.

2	1.89
Ø BM	1.89
Ø D%	0.37
Ø ΔE	1.52
1.77	

BestMatch **disabled** (=white background) and 1.89 is the BestMatch target

Standard target density is **enabled**
1.77 is currently active target density

2	1.89
Ø BM	1.89
Ø D%	0.37
Ø ΔE	1.52
1.77	

BestMatch **enabled** (=blue background and BM icon next to unit number shows up) and 1.89 is the BestMatch target

Standard target density is **disabled** (=white background)

3

Required density change

Required density change, ink-key change to reach BestMatch DeltaE

4

BestMatch information

Shows BestMatch information

BM target density, averaged

Required density change, averaged

Predicted BestMatch DeltaE when
BestMatch target density is reached

Ø BM	1.44
Ø D%	-0.09
Ø ΔE	1.41

5

Go to Measurement View

[1.1. Measurement view](#)

1.1.6. Dotgain Curve View

1 View Dotgain Curve

Displays dot gain curves

2 Dotgain curve

Dotgain curves:

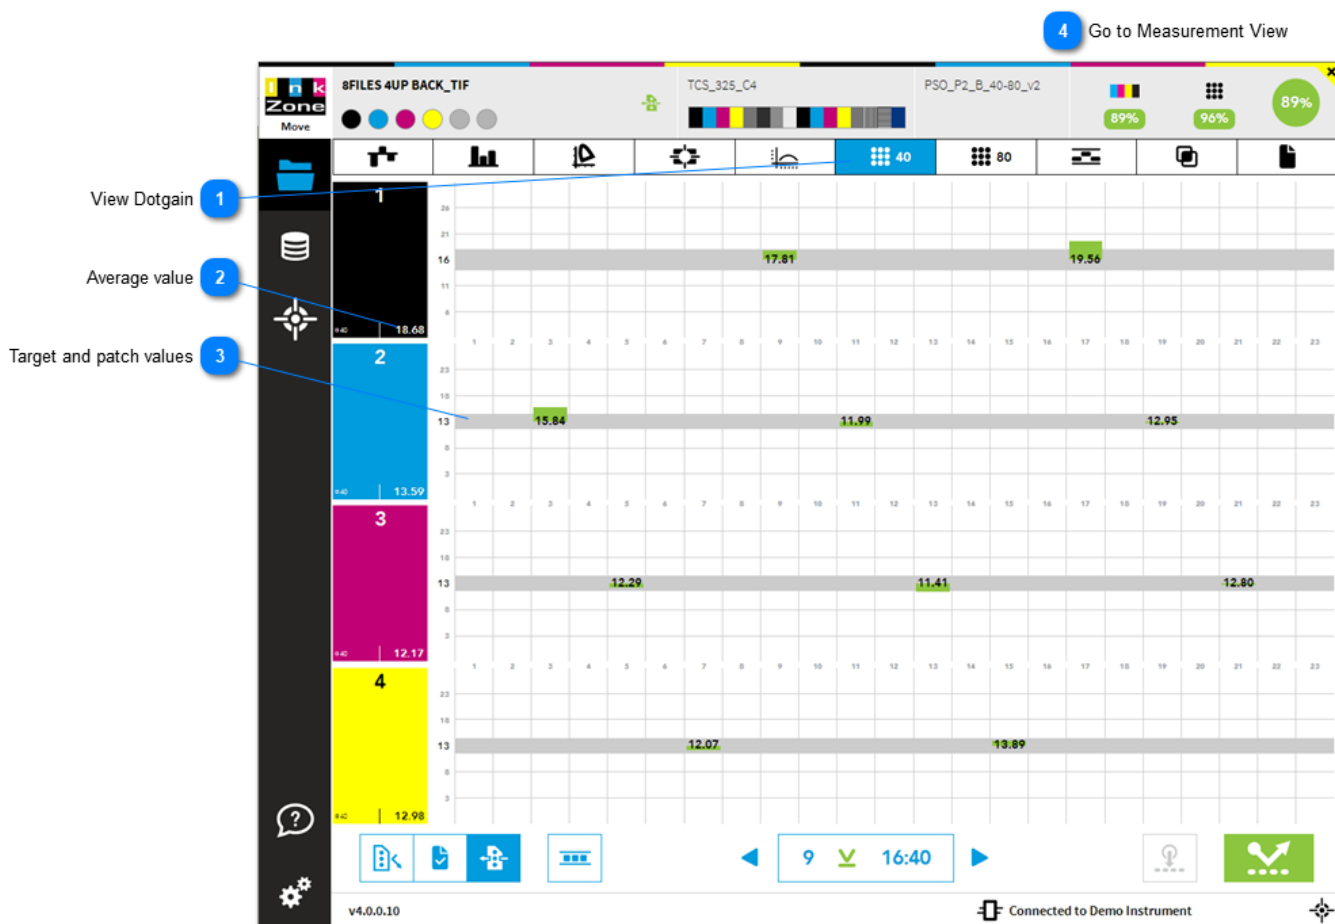

Grey	expected curve
Dotted grey	tolerance area
Colored	dotgain curve press sheet

Go to Measurement View

[1.1. Measurement view](#)

1.1.7. Dotgain View

1

View Dotgain

Displays dot gain on measured patches

Go to Measurement View

[1.1. Measurement view](#)

1.1.10. Paper View

1

Paper view

Displays information on paper measurement

2

DeltaE

DeltaE values for paper patches

3

Delta ab

Delta ab values for paper patches

4

L values

L value for paper patches

5

Go to Measurement View

[1.1. Measurement view](#)

1.1.11. Mask Ink-Key & Units

Disable units or single ink-keys in the mask view. The scoring is updated in real time and disabled ink-keys or units are excluded from color-control.

1

Set ink key status

Click on a single ink key or swipe from left to right to change the status of an entire unit
 White tick = not selected (default) = used for scoring and color-control
 Black tick = selected = disabled

2

Go to Measurement View

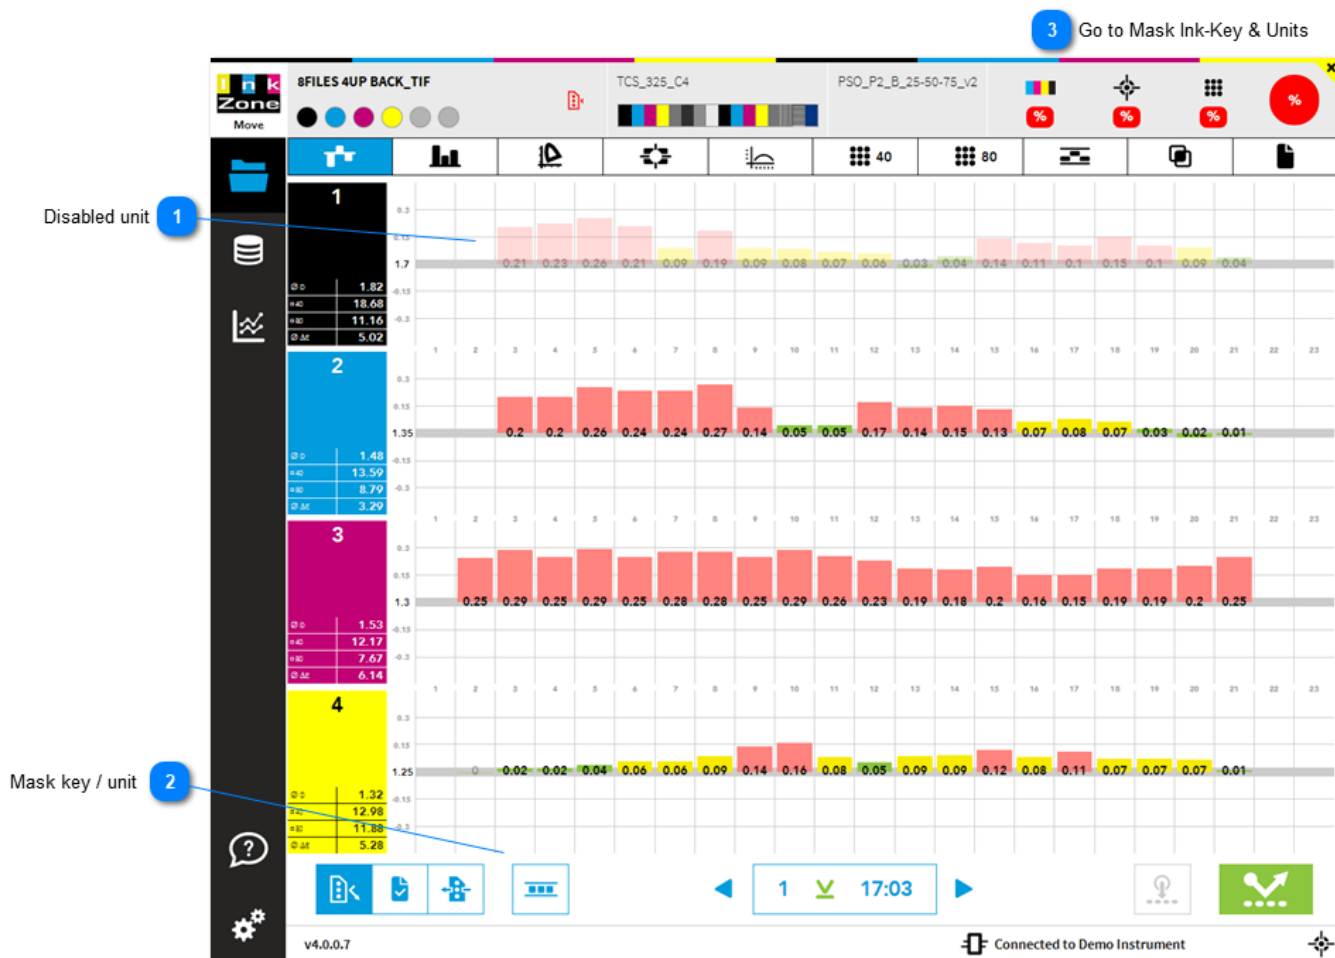

[1.1. Measurement view](#)

3

Go to Measurement View when key status is disabled

[1.1.10.1. Masked view](#)

1.1.11.1. Masked view

1 Disabled unit

The measurement data is dimmed indicating disabled key / unit

2 Mask key / unit

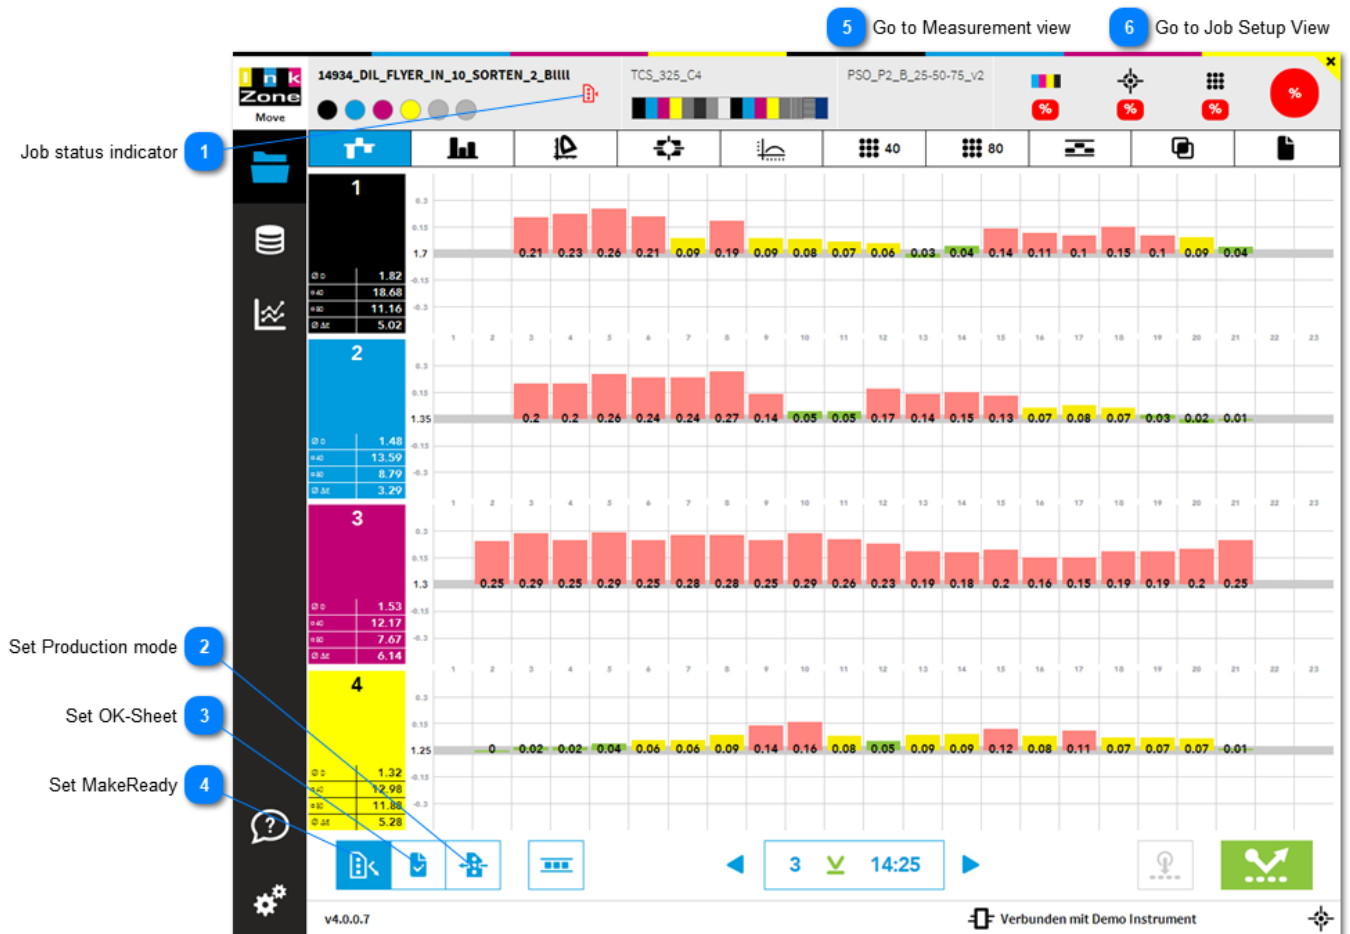

Mask from here key/s and unit/s
See here [1.1.10. Mask ink key / unit](#)

3 Go to Mask Ink-Key & Units

[1.1.11. Mask Ink-Key & Units](#)

1.1.12. Job Status

1 Job status indicator

Shows the current job status

2 Set Production mode

Change to production mode

3 Set OK-Sheet

Sets the current measurement, the sheet, as the OK-sheet.

See more details here: [1.1.12.1. OK-Sheet](#)

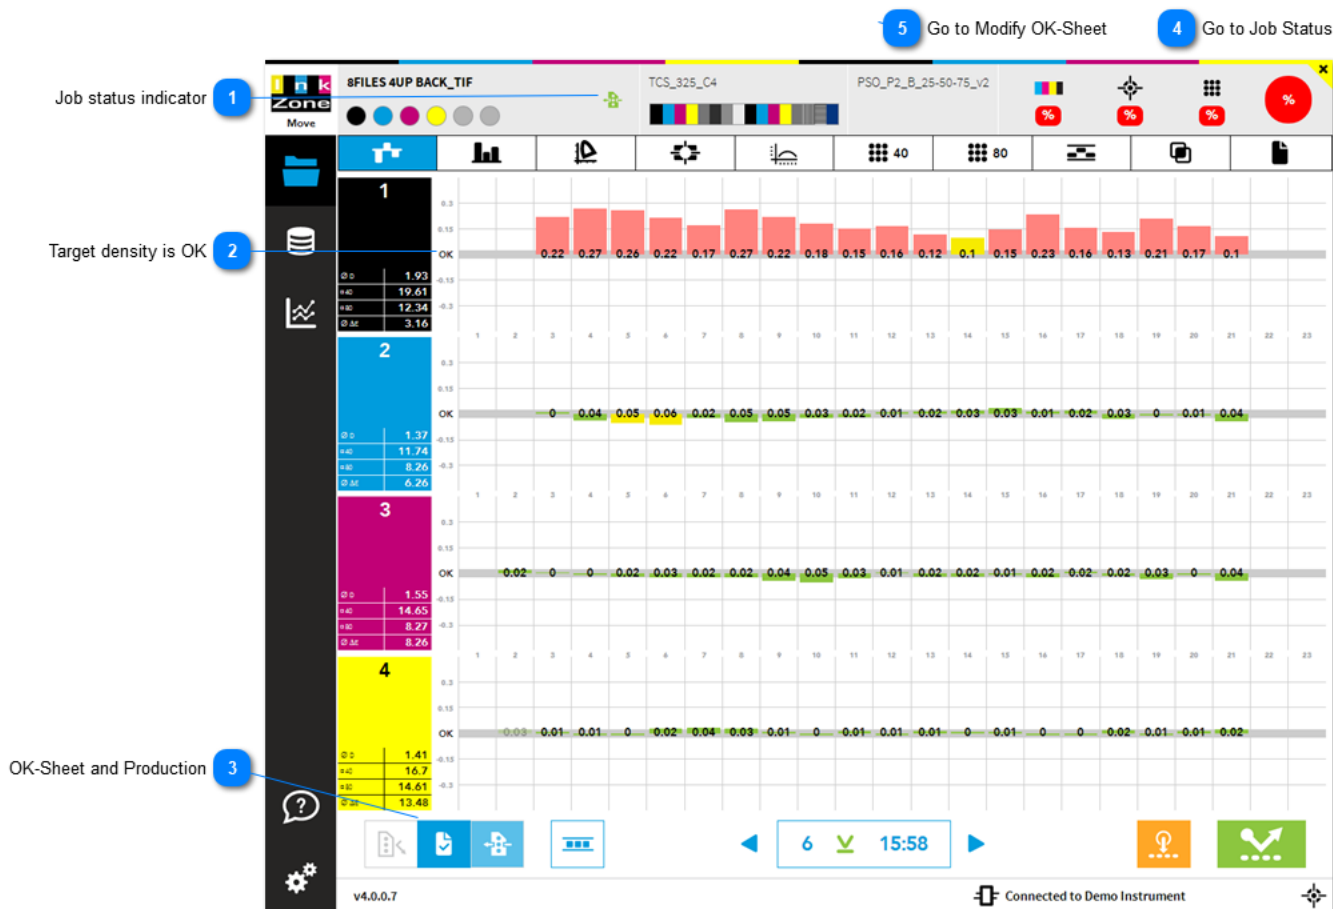

4 Set MakeReady

Every new job is initially in MakeReady status. Change to the status OK-sheet or Production mode.

5**Go to Measurement view**[1.1. Measurement view](#)**6****Go to Job Setup View**[1.1.1.1. Job-Setup View](#)

1.1.12.1. OK-Sheet

1

Job status indicator

The icon changes to OK-Sheet

2

Target density is OK

The target density becomes OK

3

OK-Sheet and Production

The buttons OK-Sheet and Production are active

4

Go to Job Status

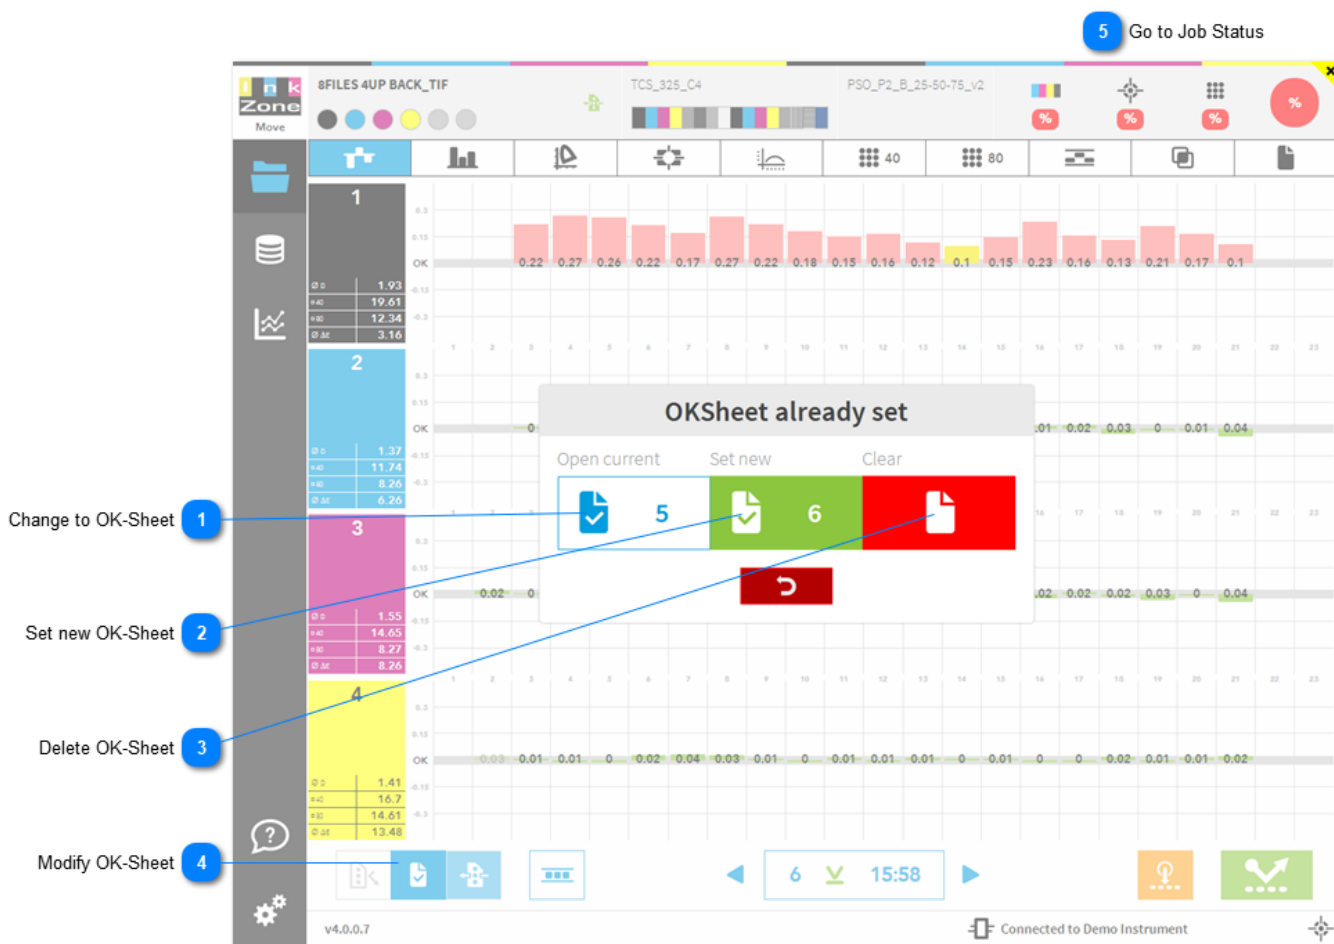

[1.1.16. Job Status](#)

5

Go to Modify OK-Sheet

[1.1.12.2. Modify OK-Sheet](#)

1.1.12.2. Modify OK-Sheet

1 Change to OK-Sheet

Opens the current OK-Sheet. In this sample it's sheet number 5.

2 Set new OK-Sheet

Sets the current measurement as the new OK-Sheet, like sheet number 6.

3 Delete OK-Sheet

Deletes a previously set OK-Sheet and returns to one target density per ink unit.

4

Modify OK-Sheet

When an OK-Sheet is already set and the button is again pressed then 3 options become available to choose from :

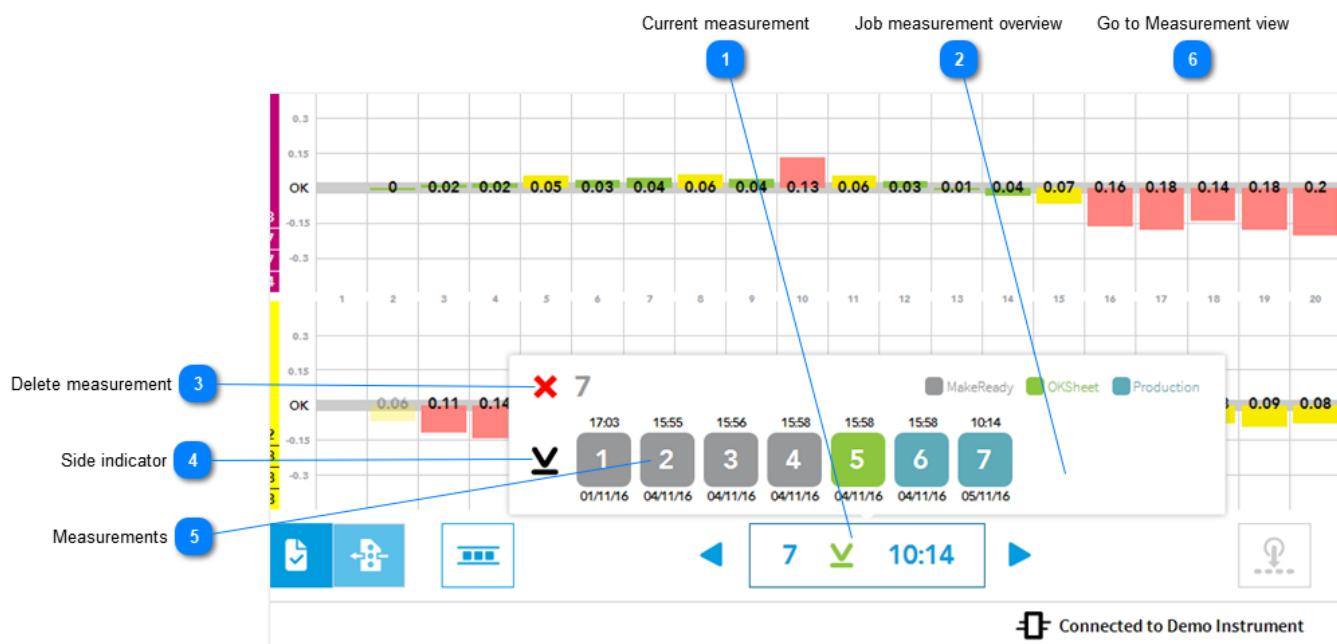

1. Change to the currently set OK-Sheet measurement
2. Set the current measurement as a the new OK-Sheet
3. Remove the OK-Sheet

✓

1

Relative view

Density relative values

Applies to the density relative measurement view.

When active measured data shows relative to target instead of the absolute density value.

Relative view

Absolute view

2

Perfecting Press Setup

Front and back on single page

It is recommended to activate when configuring the press as a perfecting press.

In the measurement view the control buttons move to the right side to gain more space in height:

3

Compact view

Hide inactive side keys

Side ink keys without measurement are not displayed in order to get a more compact measurement data view

Hide active

Side ink keys without measurement data are omitted and not displayed.

Hide inactive

All ink keys from press setup are shown even when no measurement data is available for side ink keys.

4

Same color

Allow same colour in different units

When active the software allows to use a specific color in more than one print unit

5

Auto transfer

Enable auto ink key transfer

After scanning a press sheet the software automatically transfers data to InkZoneLoop/console for color-control.

6

Sync command

Sync with press before scan

Activate when InkZoneLoop is used. During the scan operation InkZoneLoop synchronizes its ink key position with the press.

7

Color bar position

Colorbar position

Select from the drop down menu one of the two options:

When selecting **always centred**, the colorbar measurement data is aligned centred over the ink-keys. The option **centred and shifted** lets the operator choose how the color bar is aligned. When selecting shifted, the start key is set in the job setup screen.

8

Scan error detection

Enter a density value to detect wrong scan data. When the scan data exceeds the setup value, the key will be not regulated.

Sample:

Target density setup = 1.55

Measurement = 0.3

Setup "disable key for out of range density" = 0.85

Difference of target / measurement = $1.55 - 0.3 = 1.25$

The difference 1.25 exceeds the setup value 0.85. The ink key will be not regulated

An ink-key affected by the "out of range" value is shown with a red warning triangle and is not regulated.

A general regulation change for all units.

10 Return to System Setup

[1.2.7. System Setup](#)

1.2.1.3. Press with Perfector

4 Go to Press Setup

The screenshot shows the InkZoneMove software interface. The main area is titled 'Settings' and has three tabs: 'Printing conditions', 'Measuring conditions', and 'Connected modules'. The 'Printing conditions' tab is active, showing a 'PRESS' section with a 'COLORBAR' button. Below this, there are two buttons: 'M600' and 'SM74' (which is selected and has a checkmark). To the right, a table displays machine specifications:

Name	SM74	Number of keys	23
Machine type	sheet-fed	Key width	32.5

Below the table is a color bar with 8 units, each with a number and a color label: 1 (BLACK), 2 (CYAN), 3 (MAGENTA), 4 (YELLOW), 5 (BLACK), 6 (CYAN), 7 (MAGENTA), 8 (YELLOW). Three callouts point to specific parts of the interface:

- 1 Units before perfector: Points to the 'M600' button.
- 2 Perfector position: Points to the 'SM74' button.
- 3 Units after perfector: Points to the color bar.

At the bottom of the interface, there is a status bar showing 'v4.0.0.8' and 'Connected to Demo Instrument'.

1

4 Go to Press Setup

1 Machine type

Machine type web press ▼

Machine

2 Console's ink-key direction

For some web presses with two consoles, one for upper side and one for the lower side units, the ink-key direction on the console desks are not necessarily the same.

On one console side the key nr 1 is on the left which means to use the setting "Lowest to highest inkkey", e.g. 1 to 32.

For the other side, the ink key on the left is the highest and the lowest is on the right, e.g. 32 to 1.

For this case change the ink-key direction to "highest to lowest ink key".

3

Press units

Each print tower indicates an upper and lower print unit.
A press with 4 print towers is setup with 4 units.

Note:

in IZPerfect/Loop version 6 and 7 you still need to setup 8 units for such web press.

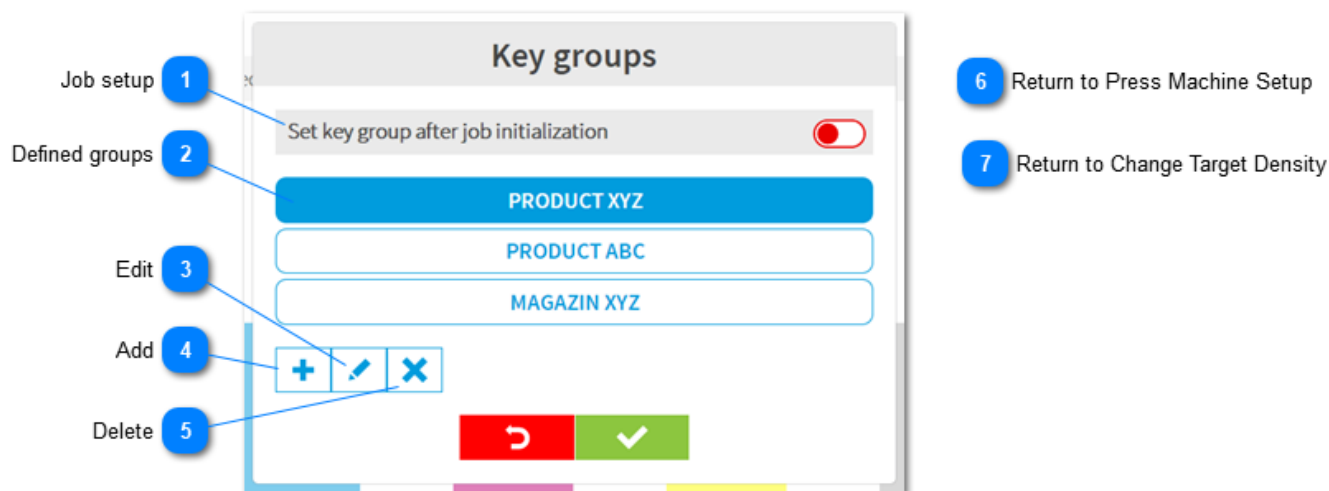

4

1.2.3.1.1. Tolerance for Mid-tone and Sheet Consistency

When hovering over the left side of the targetset name (see red arrow), the tolerance setup for mid-tone spread and sheet consistency is shown.

1 Mid-tone

Midtone spread tolerance

Set-up tolerances for mid-tone spread.
It compares the TVI mid-tone value (40 or 80%) of C,M and Y.

2 Sheet consistency

Sheet consistency tolerance

Set-up tolerances, deviation from density average, for every printed color.
The sheet consistency density value compares the solid patch distribution to the average density.
A good sheet consistency means that the density across the sheet has been perfectly leveled out:

With a low consistency value, the density across the sheet varies a lot:

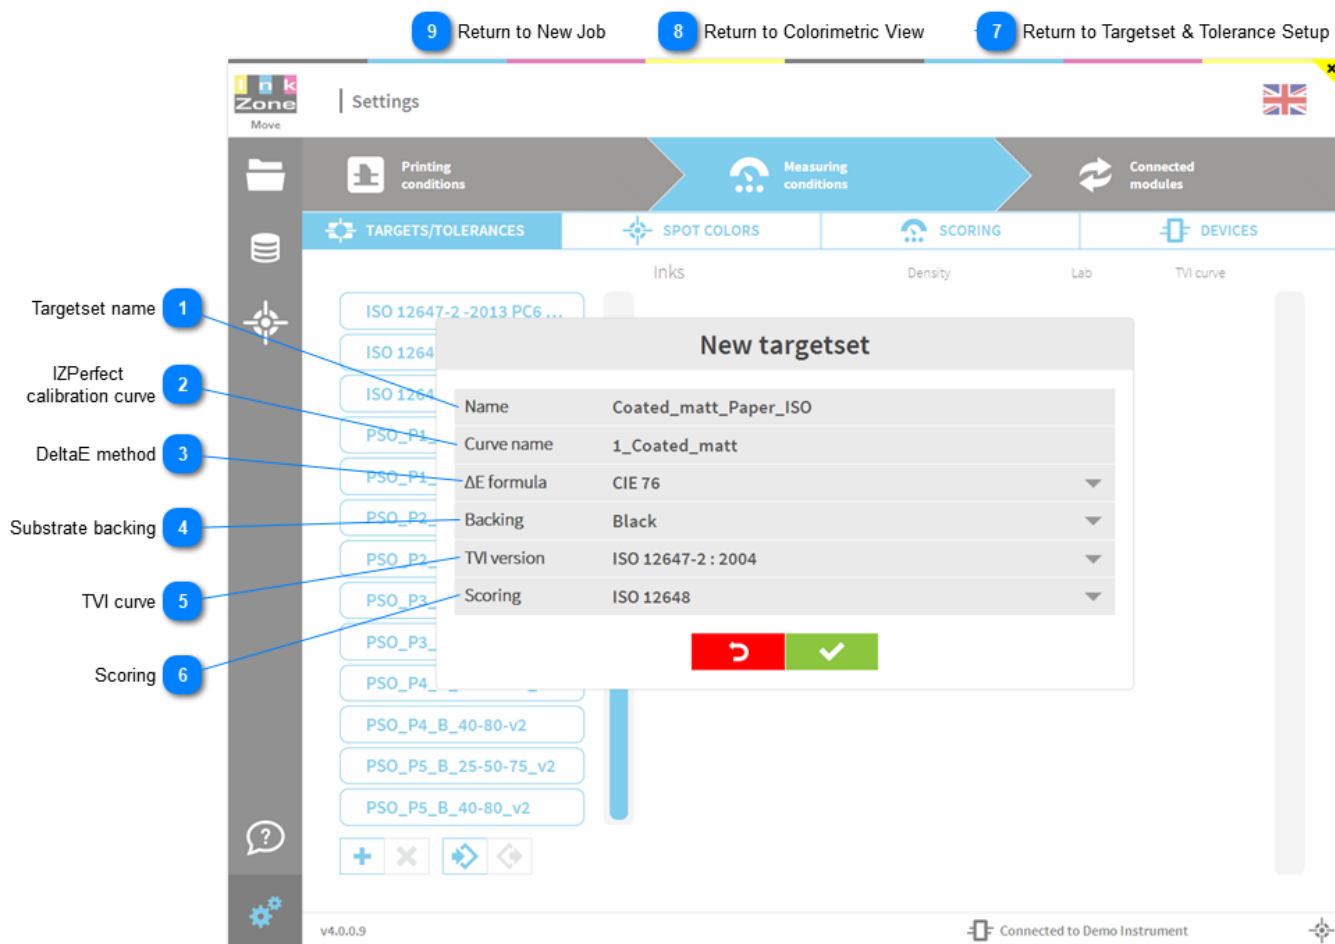

3

[Go to Scoring Criteria](#)

[1.2.5.3. Scoring Criteria](#)

1.2.3.2. New Targetset

1

Targetset name

Name Coated_matt_Paper_ISO

Set an unique name for the color targetset.
A targetset is used for every job to define its color standard

2

IZPerfect calibration curve

Curve name 1_Coated_matt

Select here the ink preset calibration curve used by InkzonePerfect when a new job is prepared. When a new job is sent from InkzonePerfect to IZMove the "calibration curve" information is passed to IZM. With this information, IZMove loads the corresponding, or let's say linked, targetset in IZMove automatically.

See [1.2.3.2.1. Calibration Curve InkzonePerfect](#)

3

DeltaE method

ΔE formula CIE 76

Select the DeltaE formula to be used.

New targetset	
Name	Coated_matt_Paper_ISO
Curve name	1_Coated_matt
ΔE formula	CIE 76
CMC	
CIE 94	
CIE 2000	
CIE 76	

4

Substrate backing

Backing Black

Choose between black and white substrate backing.

The ITX and ETX are always black backing. ISO requires black substrate backing.

New targetset	
Name	Coated_matt_Paper_ISO
Curve name	1_Coated_matt
ΔE formula	CIE 76
Backing	Black
Black	
White	

5

TVI curve

TVI version ISO 12647-2 : 2004

Choose between the TVI curve definition from 2004black and white substrate backing.

New targetset	
Name	Coated_matt_Paper_ISO
Curve name	1_Coated_matt
ΔE formula	CIE 76
Backing	Black
TVI version	ISO 12647-2 : 2013
ISO 12647-2 : 2004

See [1.2.4.1. Spot Color View](#)

7

Search color

Add a part of the spot color name to quickly find the color

8

Import color library

Import a CxF color exchange file

9

Create new spot color

Creates a new spot color:

Set the spot name
Choose the density channel
Choose a TVI base curve

10

Delete targetset

Deletes the currently selected spot color targetset

11

Create new targetset

Creates a new spot color targetset

12

Export color library

Exports spot color data as CxF

13

Go to Measurement View

[1.1.2. Density Relative View](#)

1.2.4.1. Spot Color View

1

Targetset name

Pantone Coated

The spot color targetset where the color is assigned to

2

Color name

PANTONE 2945 C

Color name

3

Density measurement channel

Channel MAX

Usually the density filter channel for measuring a spot color with a spectrophotometer is set to MAX, meaning the maximum peak from its remission. Nevertheless, it is possible to change the filter to K, C, M or Y

4

Lab target

L 29.34 a -4.72 b -54.42

Lab target value

5

Target density with tolerance

6

Front / Back target selector

Setup an individual density target for front and back side.

7

DeltaE tolerance

 ΔE

Color tolerance in DeltaE

With this setup the DeltaE for a front and back measurement is displayed as:

0 - 3	green
3.01 - 5	yellow
> 5	red

8

Spectral remission

Spectral remission curve

9

TVI values with tolerance

TVI curve values and their tolerance

10

Visualized TVI curve

Visualized TVI curve with the TVI expected value for 5 to 95%.

11

TVI curve type

A	B	C	D	E	F	LINEAR
---	---	---	---	---	---	--------

ISO 12647-2 uses different sets of predefined TVI curves named A to F. A linear curve is when the dot gain is expected like
 5%Tone TVI=5;
 10%Tone TVI=10;
 etc.

12

Delete color

Deletes the color

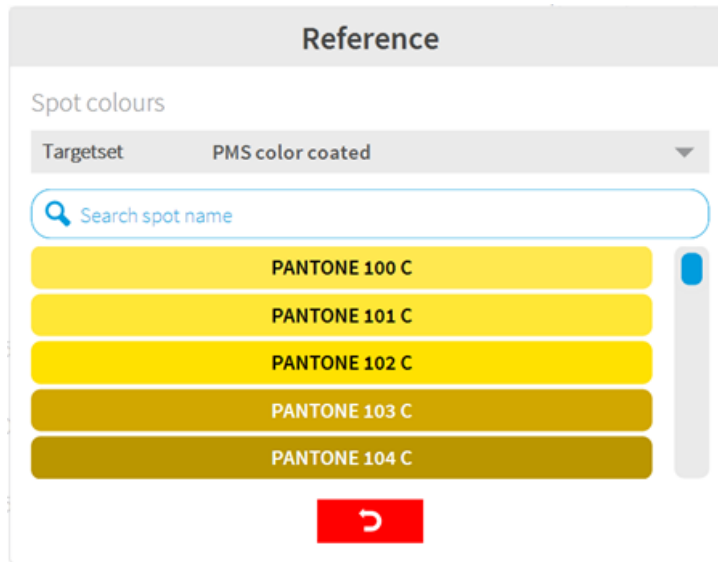

13

Links to an existing color

Create a link to an existing spot color.

Select the reference color in the dialog. Use the search to filter the color list.

14

Measure with instrument

Place the instrument on the sample and start the color reading with this button. Alternatively, use the instrument measurement button.

5

Display

Visible

Display the criteria on the measurement view in top right corner:

See also the dynamic scoring selection: [1.1.17. Select scoring set](#)

6

Status

Obligatory

Choose if the criteria is obligatory or informative. Only items with status obligatory are used for the total score calculation.

7

Assessment

Setup the scoring value based on the tolerance area green, yellow and red from the targetset.
See the tolerance setup in the targetset here: [1.2.3.1. Edit Color](#)

As an example:

In the targetset, the primary's tolerance is set:

Green	Yellow	Red
DeltaE < 4	DeltaE > 4 and < 5	DeltaE > 5

In this sample, the primary color scoring is set like:

Now, let's presume the sheet measurement is:

Average DeltaE's are K = 2.31, C = 3.54, M = 4.52, Y = 5.66

This creates a score as K = 4 points, C = 4 points, C = 3 points, Y = 0 points

Total score = 4 + 4 + 3 + 0 = 11 points (max score is 16 points)

Result in percentage = $11 / 16 * 100 = 68.75\%$

8

See here [1.2.6.2.1. Setup for Demo Purposes](#)

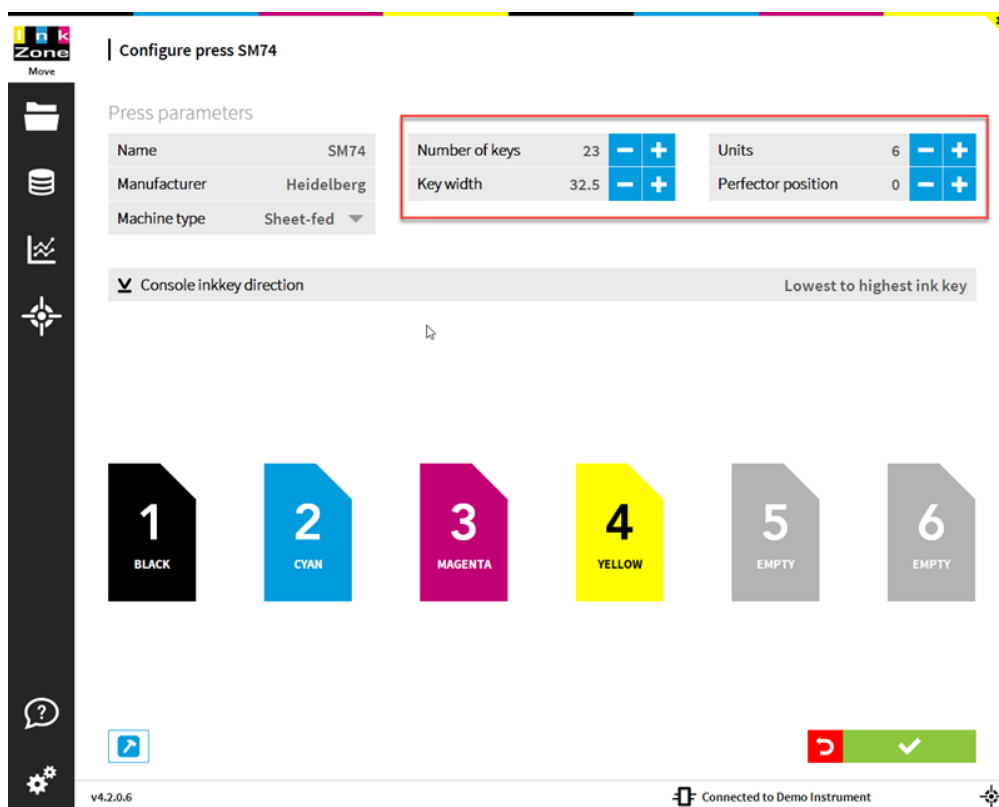

1.2.6.2.1. Setup for Demo Purposes

The Demo Instrument has a set of prepared scan measurement data. The best results are achieved when you following this three steps:

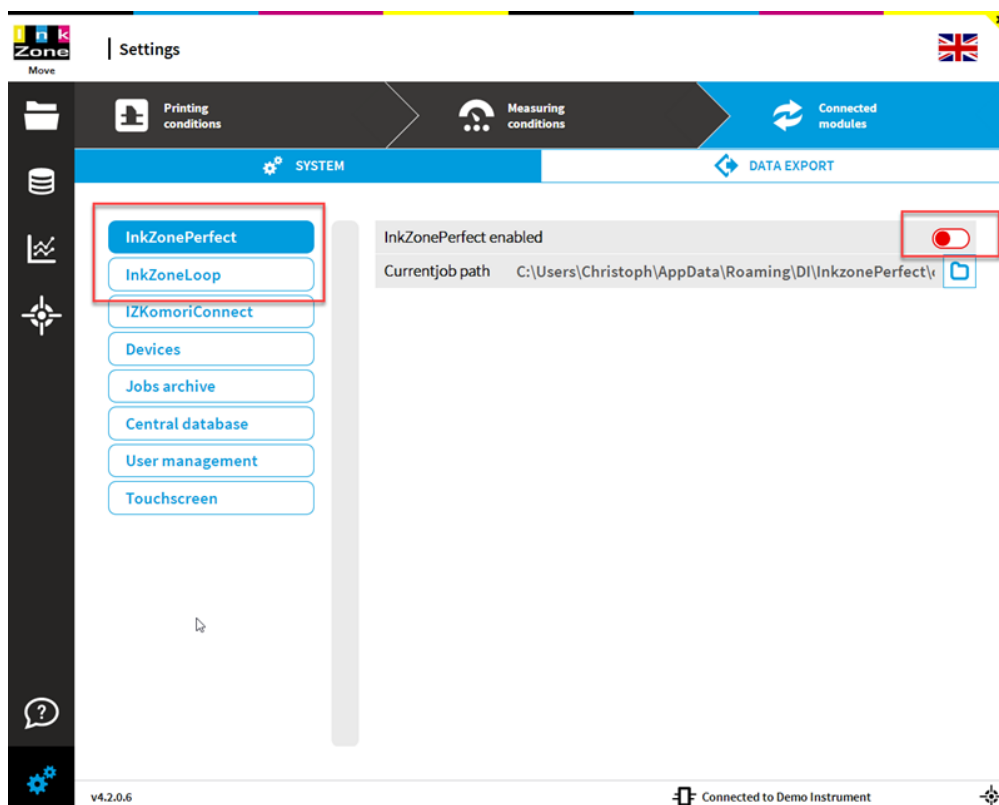

Step 1: Use TCS_325_C4 as the colorbar:

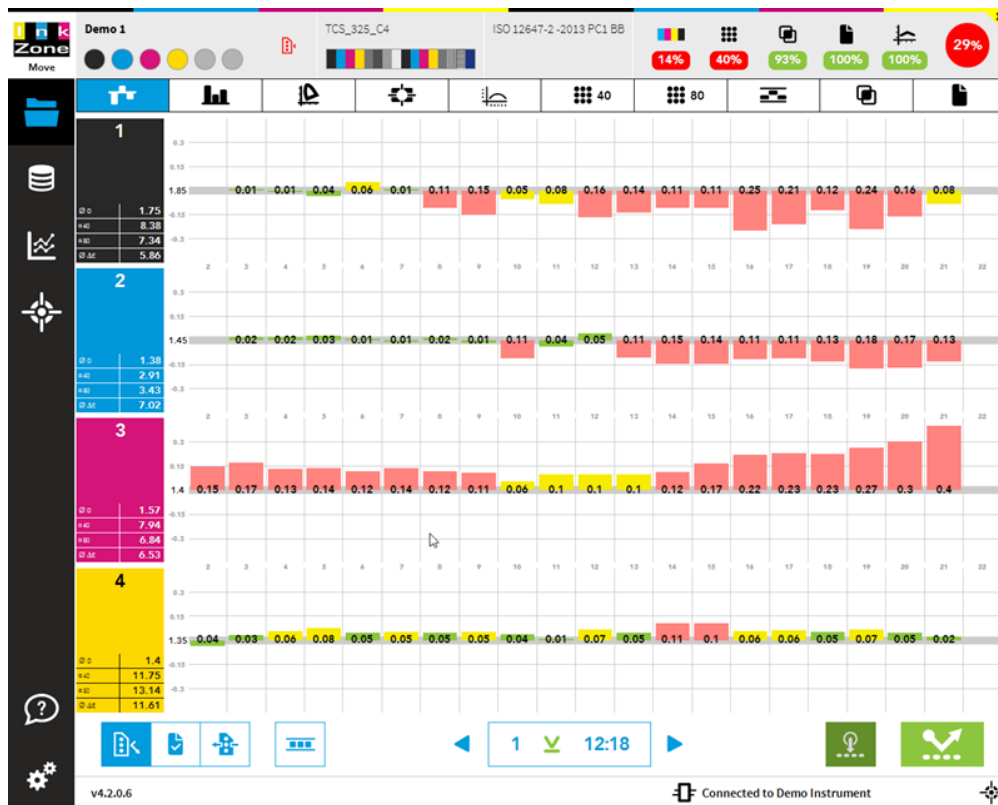

Step 2: Setup the press parameter to 23 keys, key width 32.5mm, 6 units with Perfector off.

Step 3: Enable InkZonePerfect / InkZoneLoop when the programs are installed otherwise turn them both off:

Step 4: Measurement view after first scan

10

Troubleshooting

If you experience continuously connection problem to the device than try using a fixed WLAN channel.

Do like:

1. Download a WLAN channel scanner app to your mobile

2. Find the channel with the lowest traffic
3. Change in the configuration "Wireless channel" from Automatic to a fixed channel. Channel 2 to 11 are valid.

4. Quit InkZoneMove and unplug and replug the Techkon USB WLAN box. Restart InkZoneMove. Finish

Specification

Producer	X-Rite
Patch size	min. 3.0mm with aperture size 1.5mm min 4.0mm with aperture size 2 mm More details are here: Min Patch size X-Rite tech support
Size	up to 65"
Connected by	USB and Bluetooth See: 1.2.6.13.1. Connect by Bluetooth
Measurement Conditions	M0, M1, M3
Comment	supports automated scanning replaces EasyTrax

1.2.6.13.1. Connect by Bluetooth

From X-Rite support page:

You must use the pairing code '**default**' (no quotes) when pairing a BlueTooth-enabled eXact to a PC. Pairing the BlueTooth-enabled eXact handheld incorrectly can result in the appearance of a connection, but the device will not interact with X-Rite software.

Step by step pairing procedure:

1. Insert the supplied BlueTooth dongle into an available USB port. Windows will automatically search for and find the proper drivers.
Make sure that BlueTooth is activated on the eXact by going to My Settings>Instrument>BlueTooth and selecting 'On'.
2. In the Windows Toolbar (in the lower right corner) click the BlueTooth icon and select 'Add a Device'. A window will open and will populate with available BlueTooth devices. Note that it may take several seconds before the available devices are identified by name in the list. Any eXact with activated BlueTooth that are in range will show up in the list and will be identified by their serial number.
3. Select the eXact from the list that you wish to pair. Click 'Next'.
4. You will be presented with Pairing options. Select '**Use the device's pairing code**' and click 'Next'.
5. In the next window, confirm that you are connecting to the correct device and enter the **eXact's pairing** code: '**default**' (do not type the single quotes).
6. A message will appear that the eXact has been successfully paired and device drivers will be loaded.

1.2.6.13.2. Connection Status

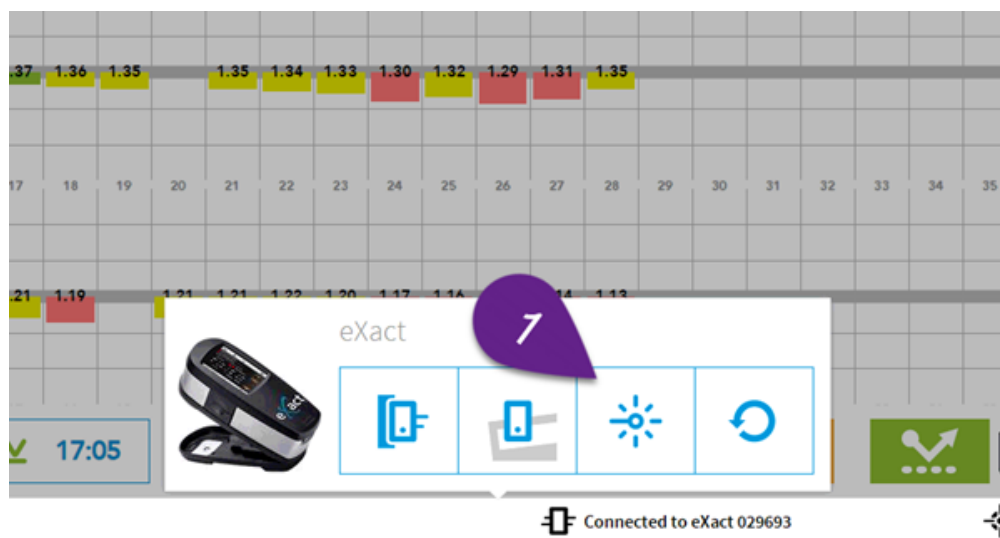

The instrument changes the Bluetooth symbol from **grey** to **blue** when a computer successful connects to it. A grey symbol means no connection!

1.2.6.13.3. Laser On

Switch on the eXact autoscan line laser (1) in the instrument dialog, accessible from lower right corner. The laser stays on for 30 seconds.

There is no button to switch it off manually.

- b) Data-Export

2

Menu System

Opens the submenu System

3

InkZonePerfect

When InkZonePerfect (ink-preset) is installed on the same computer then enable it here.

After the activation, a new job from always starts from InkZonePerfect by selecting the prepared CIP3 data with job name and color separation.

Note

The current job path is correctly pre-selected. Change the path only when required.

Job setup in InkZonePerfect, see here: [1.2.3.2.1. Calibration Curve InkzonePerfect](#)

4

InkZoneLoop

**Setting Enable/Disable**

With InkZoneLoop installed on the same computer, enable the application in IZMove here.

All measurement data created by InkZoneMove is sent to the selected scan data folder to be processed by InkZoneLoop.

Setting: Disable key for out of range density

Set a density threshold to detect wrong scan data. When the scan data values exceed the threshold will cause no regulation for this particular ink-key.

Sample:

Target density setup = 1.55

Measurement = 0.3

Setup "disable key for out of range density" = 0.85

Difference of target / measurement = $1.55 - 0.3 = 1.25$

The difference 1.25 exceeds the setup value 0.85. The ink key will be not regulated

An ink-key where the density is detected as "out of range" is shown with a red warning triangle and is not regulated at the press.

With InkZoneLoop installed, verify the **synchronize** option (needs to be activate) in the press setup.

See here: [1.2.1.2. Advanced Press Settings](#)

5

InkZoneReport

**Company name and logo**

Select company name and logo which appears on the report print out

Company name	DI
Company logo path	C:\logos\logo_digiinfo_cmyk.tif  

PDF job name setup

Setup a job name with the parameters in brackets for generating the job name for PDF sheet and production reports:

Printed report filename template

<job>, <date>, <time>, <sheet_number>, <sheet_report>, <production_report>

Sheet report	<job>_<sheet_report>_<date>_<time>_<sheet_
Print Production-Report	<job>_<production_report>_<date>_<time>

<job>	job name
<sheet_report>	if the term Sheet-Report appears in the name
<production_report>	if the term Production-Report appears in the name
<date><time>	date and time
<sheet_number>	sheet number

E-Mail report setup

Sends PDF reports over e-mail.

Setup mail server SMTP host address and port. Define the e-mail sender's address.

See further information on sending mails through Google Mail: [Send e-mail with Google Mail server](#)

Email sending

SMTP host	smtp.gmail.com	SMTP port	465
Use authentication	<input checked="" type="checkbox"/>	Username	Press room SM102-6
		Password	*****
Send mail as	pressroom@gmail.com		

E-Mail recipients

Create an alias with one or a group of e-mail recipients. For a group of recipients, use a semi-colon to separate the mail addresses.

An alias is either internal or external. This helps avoiding mistakes when sending reports.

The rule is that e-mails defined as internal can be send always whereas external addresses are sent only when customer name from the job setup matches the e-mail alias name.

See setup customer name here: [1.3.2. New Job](#)

Approved recipients

Name	QC	Email address	qc@printer.com	Address type	Internal	
Name	PrintBuyer1	Email address	purchase@prnbuyer.com	Address type	Customer

1.2.7.1. Central Database

Select one of the tabs **Spot Colours**, **IZTVI** or **Report Jobs** and configure the synchronization to a main database.

The screenshot shows a configuration window with two tabs: **SPOT COLOURS** and **IZTVI**. The **SPOT COLOURS** tab is active. It displays two server configurations, **Server 1** and **Server 2**. Each server has a set of settings: **Enabled** (toggle), **IP address** (text), **Pull data** (toggle), **Status** (text), **Push data** (toggle), and **Status** (text). A red 'X' icon in a box is next to each server name, indicating a delete action. A blue circle with the number 5 points to the 'Delete' button.

Server	Enabled	IP address	Pull data	Status	Push data	Status
Server 1	Enabled	192.168.17.88	Enabled	6/20/2018 10:21 PM	Enabled	Unknown
Server 2	Enabled	192.168.17.89	Enabled	6/20/2018 10:21 PM	Enabled	Unknown

1 Settings Server 1

This block shows the detailed settings for **Server 1**. It includes a red 'X' icon in a box next to the server name, indicating a delete action. The settings are: **Enabled** (toggle), **IP address** (192.168.17.88), **Pull data** (toggle), **Status** (6/20/2018 10:21 PM), **Push data** (toggle), and **Status** (Unknown).

Shows all settings for server 1, including the connection status to the remote couchDB

2 Pull setup

This block shows the **Pull setup** configuration options. It includes a **Pull data** toggle and a **Status** text field.

Enable pull data to sync data from the remote server to the local database. All data from the remote database is synchronized to the local database.

First, set IP address and then enable it. The last status of the connection is shown.

3 Push setup

3

Enable push data to sync data from the local database with the remote server database. All data from the local database is synchronized to the main database.

First, set IP address and then enable it. The last status of the connection is shown.

4

Settings Server 2

Server 2	
Enabled	<input checked="" type="checkbox"/>
IP address	192.168.17.89
 Pull data	<input checked="" type="checkbox"/>

Delete the server setup.

1.2.7.1.1. Sample InkZoneMove with Centralized Database

1 Main database

Settings for PC with main database (192.168.1.1)

The database can run on Linux or Windows. For couchDB v2 a 64 bit operating system is mandatory. It's required to open the TCP port 5984, see Windows firewall setup: [1.2.7.1.2. Firewall Setup](#)

2 Clients with local databases

Test at the InkZoneMove client

After changing the firewall setup on the server, every IZM client (192.168.1.2. etc) is able to access remotely the servers couchdb configuration through a web browser, like:

http://SERVER_IP:5984/_utils/config.html (replace SERVER_IP with the real ip address)

username inkzone
password testing

The screenshot shows the Apache CouchDB Futon web interface in a browser. The address bar shows the URL `192.168.17.74:5984/_utils/index.html`. The main content area is titled "Overview" and displays a table of databases. A sidebar on the right contains navigation links for Tools, Documentation, Diagnostics, and Recent Databases.

Name	Size	Number of Documents	Update Seq
<code>_replicator</code>	4.1 KB	1	1
<code>_users</code>	4.1 KB	1	1
<code>inkzone-central</code>	0.6 MB	227	2298
<code>inkzone-colors</code>	16.1 KB	28	121
<code>inkzone-jobs</code>	11.0 MB	50	9183
<code>inkzone-jobs-report</code>	79 bytes	0	0
<code>inkzone-logs</code>	3.8 MB	9467	9467
<code>inkzone-move</code>	3.2 MB	22	43
<code>inkzone-report</code>	3.0 MB	22	43
<code>inkzone-scoring</code>	25.6 MB	14483	23671

Showing 1-10 of 61 databases | Previous Page | Rows per page: 10 | Next Page

You should see the couchdb data from the server database.

Setup InkZoneMove at the client PC

The screenshot shows the InkZoneMove application's "Settings" window. The "SYSTEM" tab is selected, and the "Central database" option is highlighted in the left sidebar. The "Server 1" configuration is shown with the following details:

- Enabled: ☒
- IP address: 192.168.17.117
- Pull data: ☒
- Status: ☒
- Push data: ☒
- Status: ☒

Set in "Central database/Spot Colours/IZTVI/Report" the server IP address and enable Pull and Push data.

Every new spot color is automatically propagated to the server database from where all other IZMove clients pull the spot color data to their local database.

Important

After creating a new spot color targetset, like “Pantone coated”, restart the clients IZMove to get it visualized in the client IZMove.

Note

The restart is not required after a new spot colors has been created, the restart applies only for targetset creation.

Verify replication status on client

- a) On the client open the link
http://localhost:5984/_utils/database.html?_replicator
to see the replication status page:

- b) 

Click on “inkzone-spots-pull”

- c) 

- 1) Should say “triggered”
- 2) Source address points to the IZM database server
- 3) Target is the local PC

1.2.7.1.2. Firewall Setup

On the main database server, the port 5984 needs to be opened.

Configuration:

a)

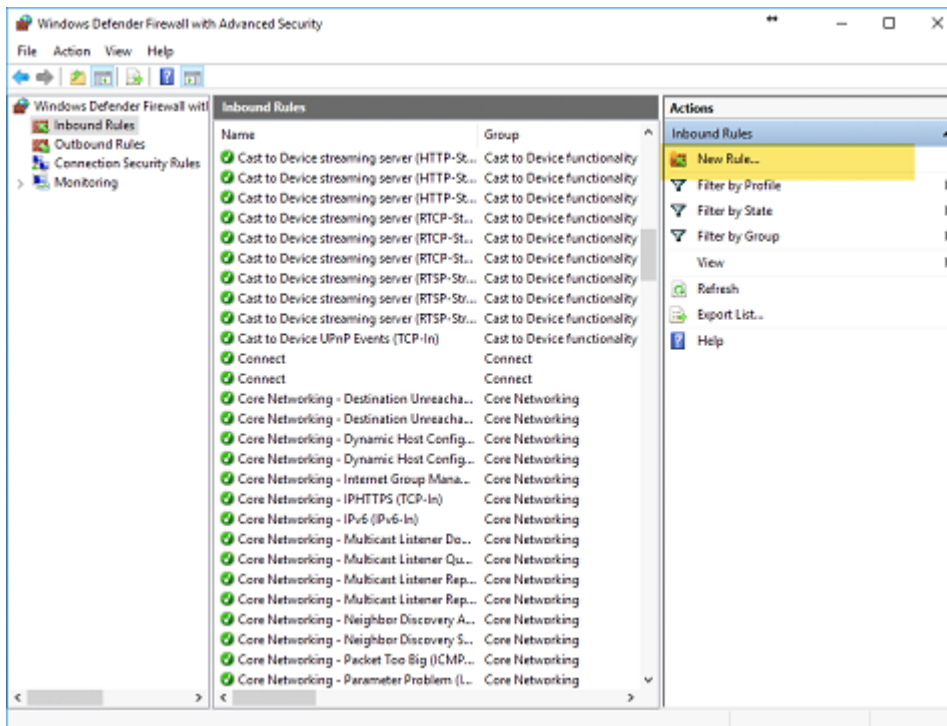

Open Firewall setting

b)

Create a new "Inbound Rule"

c)

Select "New Rule"

d)

Select Port

e)

The screenshot shows the 'New Inbound Rule Wizard' window, specifically the 'Protocol and Ports' step. The left sidebar lists the steps: Rule Type, Protocol and Ports (selected), Action, Profile, and Name. The main area contains two questions. The first question is 'Does this rule apply to TCP or UDP?' with radio buttons for TCP (selected) and UDP. The second question is 'Does this rule apply to all local ports or specific local ports?' with radio buttons for 'All local ports' and 'Specific local ports' (selected). Below the 'Specific local ports' option is a text box containing '5984' and an example text 'Example: 80, 443, 5000-5010'. At the bottom right are buttons for '< Back', 'Next >', and 'Cancel'.

Port address is 5984

f)

The screenshot shows the 'New Inbound Rule Wizard' window, specifically the 'Action' step. The left sidebar lists the steps: Rule Type, Protocol and Ports, Action (selected), Profile, and Name. The main area contains the question 'What action should be taken when a connection matches the specified conditions?' with three radio button options: 'Allow the connection' (selected), 'Allow the connection if it is secure', and 'Block the connection'. Below the 'Allow the connection' option is a description: 'This includes connections that are protected with IPsec as well as those are not.' Below the 'Allow the connection if it is secure' option is a description: 'This includes only connections that have been authenticated by using IPsec. Connections will be secured using the settings in IPsec properties and rules in the Connection Security Rule node.' and a 'Customize...' button. At the bottom right are buttons for '< Back', 'Next >', and 'Cancel'.

Allow for all connections

g)

New Inbound Rule Wizard

Profile

Specify the profiles for which this rule applies.

Steps:

- Rule Type
- Protocol and Ports
- Action
- Profile
- Name

When does this rule apply?

- ☒ **Domain**
Applies when a computer is connected to its corporate domain.
- ☒ **Private**
Applies when a computer is connected to a private network location, such as a home or work place.
- ☒ **Public**
Applies when a computer is connected to a public network location.

< Back Next > Cancel

Enable all networks

h)

New Inbound Rule Wizard

Name

Specify the name and description of this rule.

Steps:

- Rule Type
- Protocol and Ports
- Action
- Profile
- Name

Name:

CouchDB SYNC

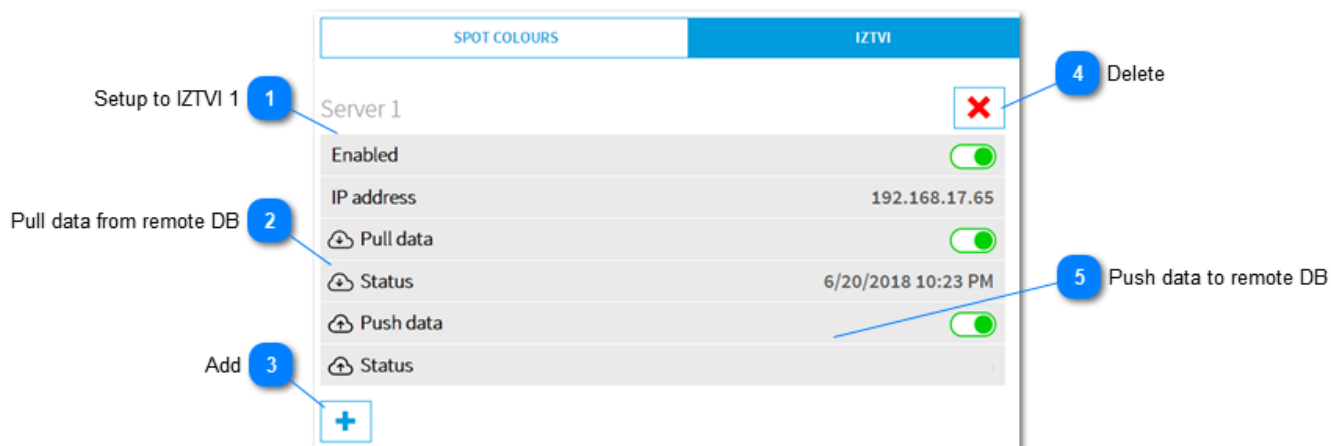

Description (optional):

< Back Finish Cancel

Give the new rule a useful name. Finish!

1.2.7.2. Database IZTVI

Select tab **IZTVI** and configure synchronization to the IZTVI database for compensation data.

1 Setup to IZTVI 1

Enabled	<input checked="" type="checkbox"/>
IP address	192.168.17.65
<input checked="" type="checkbox"/> Pull data	<input checked="" type="checkbox"/>
<input checked="" type="checkbox"/> Status	6/20/2018 10:23 PM
<input checked="" type="checkbox"/> Push data	<input checked="" type="checkbox"/>
<input checked="" type="checkbox"/> Status	

Configuration and status of connection to server 1.

2 Pull data from remote DB

<input checked="" type="checkbox"/> Pull data	<input checked="" type="checkbox"/>
<input checked="" type="checkbox"/> Status	6/20/2018 10:23 PM

InkZoneTVI data is pulled from the remote InkZoneTVI database to the local database. The second line shows the status of the last execution.

3 Add

Synchronize data to another InkZoneTVI station.

4 Delete

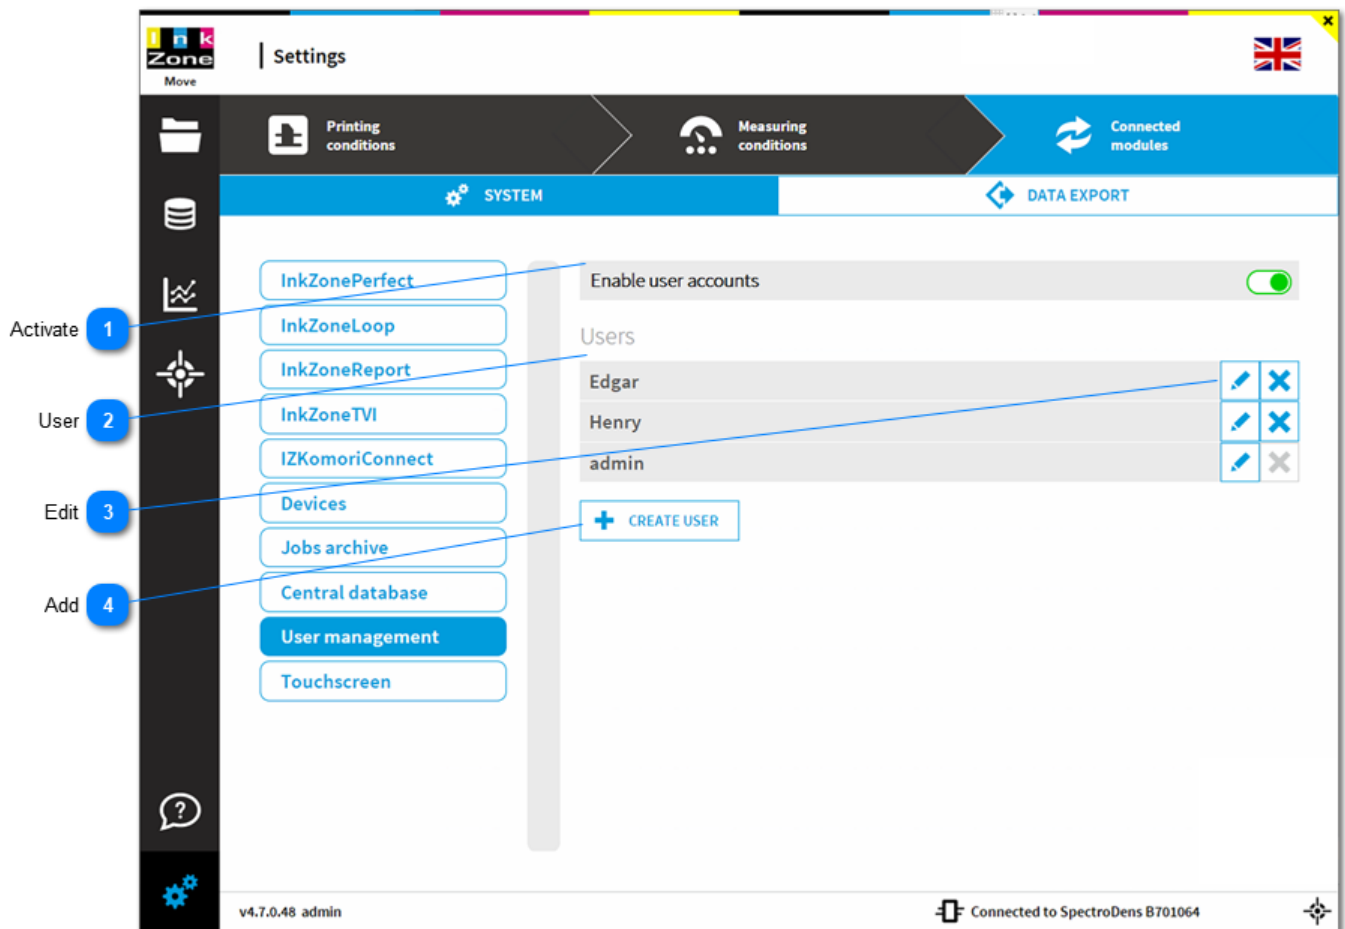

Deletes the synchronization setup.

5 Push data to remote DB

<input checked="" type="checkbox"/> Push data	<input checked="" type="checkbox"/>
<input checked="" type="checkbox"/> Status	

Data for InkZoneTVI is pushed to the remote InkZoneTVI database . The second line shows the status of the last execution.

1.2.7.3. User Management

1

Activate

Enable user accounts

Enable the user management. After startup, the user can log in with his account. The user names are recorded for every job and is printed on the IZReport.

The operator can logout from a session from the dashboard screen.

2 User

Users

Edgar		
Henry		
admin		

Manage all user from here. The admin account can not be deleted.

3 Edit

Create a new password or delete the user.

4 Add

Add a new user

1.2.8.8. PDF Report Template

Create templates with print out elements. A template is selected during the PDF report creation. See here: [1.2.8.8. PDF Report Template](#)

1

Template name

Name	Standard
------	----------

Define a template name. The template can be selected when creating a PDF.

2

Elements

Job details	<input checked="" type="checkbox"/>	Instrument and scoring setup	<input checked="" type="checkbox"/>
Summary	<input checked="" type="checkbox"/>	Dot gain	<input checked="" type="checkbox"/>
Signature	<input type="checkbox"/>	Lab graphs	<input type="checkbox"/>
Dot gain graphs	<input checked="" type="checkbox"/>	G7 graphs	<input type="checkbox"/>
CTP status	<input type="checkbox"/>		

Set the template item to **active** to include it to the PDF report print out.

3

Job details

Job details	<input checked="" type="checkbox"/>
-------------	-------------------------------------

Template item **Job details**

Adds job information, including the total score, to the PDF report:

Report type / Job name / Nr of measurements / Customer name / Date-Time / Assessment Sample:

Job details

Report type	Print Production-Report
Job name	AGRI NK - KONGRESBLAD 2017 INSIDE WT84310_3A
Number of measurements	4
Customer	
Date	07/04/2017 12:08 PM
Assessment	✓ Pass, score 87%

4

Instrument and scoring

Instrument and scoring setup

Template item **Instrument and scoring**

Adds scan instrument the print standard targetsset to the PDF report:

Targetset / Scoring set / Instrument backing / Illuminant, observer and measurement condition (Mx)

Sample:

Instrument and scoring setup

Targetset	PSO_P1_B_25-50-75_v2
Scoring	ISO 12647
Backing	Black
Illuminant / Observer / Condition	D50 / O2 /

5

Summary

Summary

Template item **Summary**

Adds a table with color and TVI assessment to the PDF report.

Read columns as:

[1] Print / Target [Lab] : printed value in bold, target values in light color tone

[2] Density : target density

[3] Delta E / Tolerance : deltaE of printed color in bold, accepted tolerance for assessment in light color tone

[4] Delta E score : scores for deltaE with the selected scoring set

[5] Dot gain score : scores for dot gain values with the selected scoring set

[6] Midtone spread: scores for mid-tone spread

Sample:

	1			2	3	4	5
	Print / Target [L a b]			D	ΔE / Tol	ΔE	
Black	16.0 / 16.0	0.8 / 0.0	1.9 / 0.0	1.80	5.4 / 5	77%	100%
Cyan	54.4 / 54.0	-35.9 / -36.0	-50.4 / -49.0	1.50	1.7 / 5	100%	100%
Magenta	49.0 / 46.0	74.8 / 72.0	-4.5 / -5.0	1.39	4.5 / 5	100%	50%
Yellow	87.9 / 87.0	-5.8 / -6.0	88.7 / 90.0	1.31	2.8 / 5	100%	100%
Red (M+Y)	48.5 / 46.0	68.5 / 67.0	45.8 / 47.0	1.53	3.9 / 10	100%	6
Green (C+Y)	49.0 / 49.0	-68.7 / -66.0	21.7 / 24.0	1.46	3.8 / 10	100%	
Blue (C+M)	25.3 / 24.0	16.8 / 16.0	-46.8 / -45.0	1.45	2.7 / 10	100%	
Paper	93.4 / 93.0	1.1 / 0.0	-2.7 / -3.0	0.00	1.3 / 3	100%	

6

Signature

Signature

Template item **Signature**

Adds at the bottom of the PDF report a customer sign-off element.

Sample:

Comments	Signed	
	Place and date	Sign

7

Dot gain

Dot gain

Template item **Dot gain**

Adds dot gain information to the PDF report.

Sample:

Dot gain 96% (obligatory)

	Target ± Tolerance					
	25%	50%	75%	25%	50%	75%
Black	12.1 ± 4	17 ± 4	13.4 ± 3	✓ 11.33	✓ 16.46	✓ 13.24
Cyan	9.3 ± 3	14.3 ± 3	12.3 ± 3	✓ 12.24	✓ 10.32	✓ 10.65
Magenta	9.3 ± 3	14.3 ± 3	12.3 ± 3	⚠ 5.53	✓ 9.92	✓ 10.07
Yellow	9.3 ± 3	14.3 ± 3	12.3 ± 3	✓ 8.57	✓ 12.66	✓ 12.21

8

Dot gain graphs

Dot gain graphs

Template item **Dot gain graphs**

Adds dot gain graphs to the PDF report.

Sample:

Dot gain curve view

9

CTP status

CTP status

Template item **CTP status**

Adds information about data exported by InkZoneTVI to the PDF report.

10

Lab graphs

Lab graphs

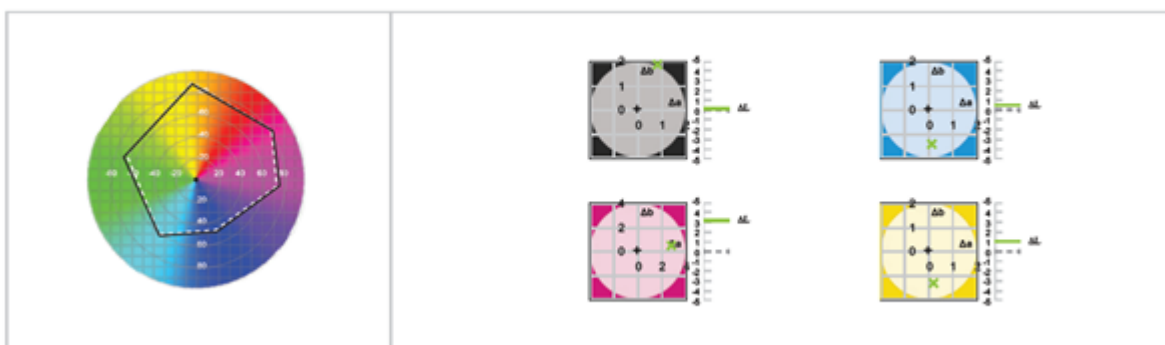

Template item **Lab graphs**

Adds a color gamut circle to the PDF report.

Sample:

Lab view

11

G7 graphs

G7 graphs

Adds a G7 graphs to the PDF report.

12

Add

Creates a PDF template which is available during PDF report creation.

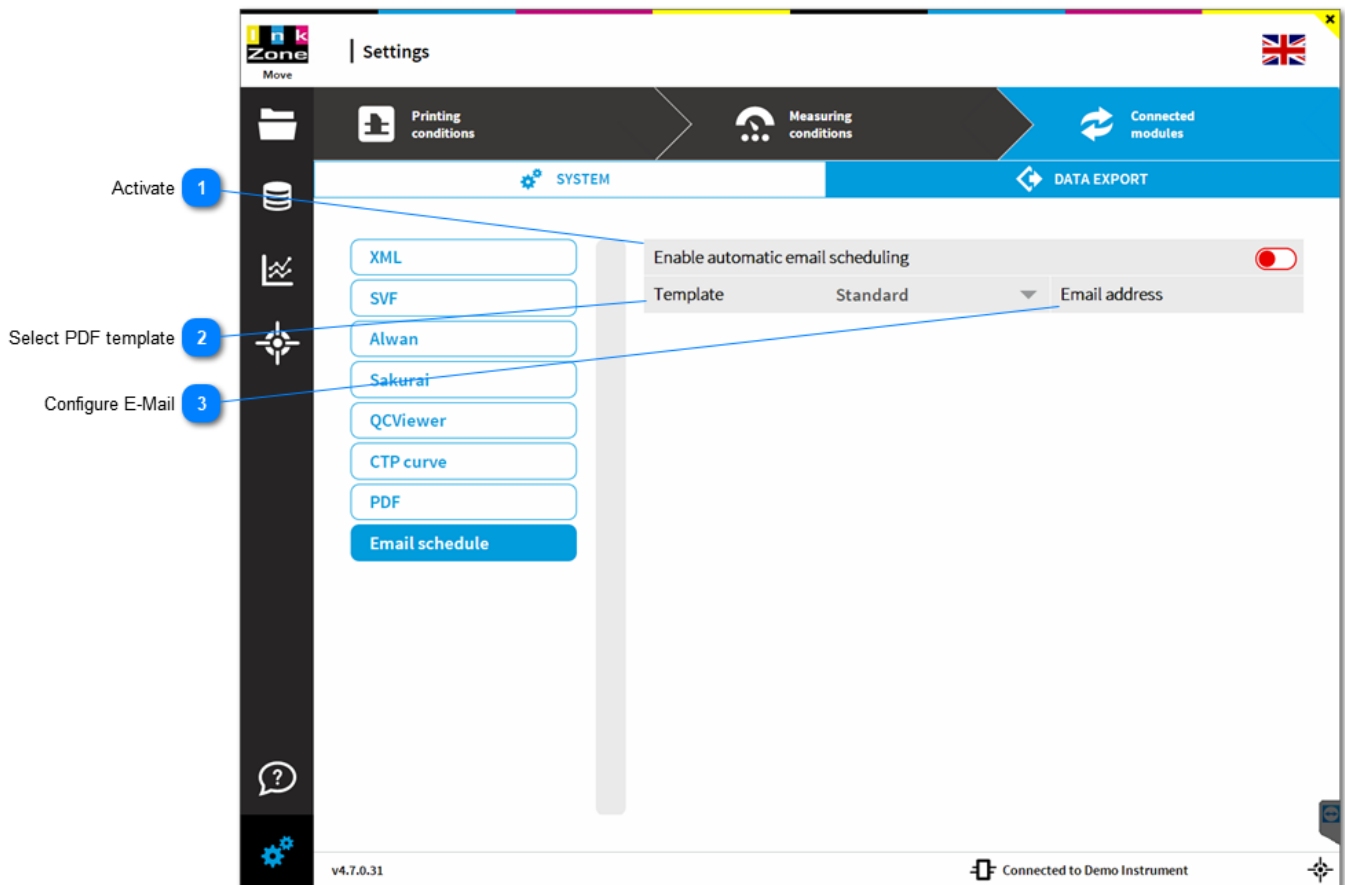

Delete the PDF template.

1.3.2. New Job

The screenshot shows the 'New job' setup interface. At the top, there are three tabs: '14 Job setup Graphometric', '13 Return to Job List', and '12 Got to Spot color setup'. The main form includes:

- 1 Job name:** A text input field.
- 2 Customer name:** A text input field.
- 3 Confirm / Cancel:** A red button with a left arrow and a green button with a checkmark.
- 4 Colorbar:** A dropdown menu showing 'Colour bar TCS_325_C4' and 'Patch height 6'.
- 5 Targetset:** A dropdown menu showing 'Targetset / Paper ISO 12647-2 -2013 PC1 BB'.
- 6 Colorbar height:** A slider control.
- 7 Colorbar:** A visual representation of the color bar with various color patches.
- 8 Advanced Colorbar:** A checkbox.
- 9 Advanced for ITX:** A checkbox.
- 10 Job template:** A selection of templates: 1.85 BLACK, 1.45 CYAN, 1.4 MAGENTA, 1.35 YELLOW, 5 EMPTY, and 6 EMPTY.
- 11 Print units:** A selection of units.

At the bottom, there is a status bar showing 'v4.2.0.12' and 'Absolute white calibration successful'.

1

Job name

Job name

When the job starts from InkZonePerfect the name is automatically set and refers to the CTP / CIP3 job name scheme from the prepress workflow.

2

Customer name

Customer

Add a customer/print buyer name to the job.
 IZReport can send PDF reports to customers. For this scenario, it is important that the costumer name set here matches the one in the e-mail setup, see here: [1.2.7. System Setup](#)

3

Confirm / Cancel

Confirm or cancel job setup

4

Colorbar

Colorbar for the front side print.

When printing with perfector, the back side colorbar needs to be set too.

Define spot color patches in the colorbar, see here: [1.3.2.2. Spot color job](#)

5 Targetset

Print targetset.

When job starts from InkZonePerfect the targetset is set automatically .

How to link the ink-preset calibration curve from InkZonePerfect to a targetset see here: [1.2.3.2. New Targetset](#)

6 Colorbar height

When using an IntelliTrax, the colorbar height needs to be set here.

7 Colorbar

Preview of the selected colorbar

8 Advanced Colorbar

Align the measurement data related to the ink-keys either centred (standard) or shifted.

See details here: [Shifted ink-key alignment](#)

9 Advanced for ITX

In advanced setup set the colorbar position with XY coordinate values when using an IntelliTrax scanner.

Go to Intellitrax XY colorbar setup: [1.3.2.2. Advanced Job Settings](#)

10 Job template

Select a predefined template job. A template job has a defined targetset, colorbar, color sequence and machine type.

See here how to set a template job: [1.1.1.1. Job-Setup View](#)

11 Print units

Print unit with target density and its assigned color. Click on the unit to add or change a color.

12

setup for spot**

[1.3.2.1.1. Colorbar setup for spot](#)

1.3.2.1.1. Colorbar Setup for Spots

1

Colorbar

Colour bar TCS_300_C6

Select an appropriate colorbar for a spot color job. In the sample a 6 patch colorbar is selected.

2

Preview

Patch assignments

Preview the patch to color assignment.

3

Patch to color

K	BLACK
C	CYAN
M	MAGENTA
Y	YELLOW
S1	N/A
S2	PANTONE 2748 C

Assign to each patch a printing color.

In this sample patch K prints Black etc. and spot color patch S2 prints Pantone 2748 C.

Use the arrow buttons left and right to change the assignment.

4

Spot color in unit

Unit 5 prints spot color Pantone 2748 C. See

5

Go to Spot color setup

[1.3.2.1. Spot color setup](#)

1.3.2.2. Advanced Job Settings IntelliTrax

This screens is only available for IntelliTrax scanners.

1 Activate XY colorbar setup

Enable the XY setup for IntelliTrax

2 XY values

The XY values are explained here [1.1.1.2.1. IntelliTrax XY coordinates](#)

3 Previous XY values

Reuse a XY setup from a previously printed job.

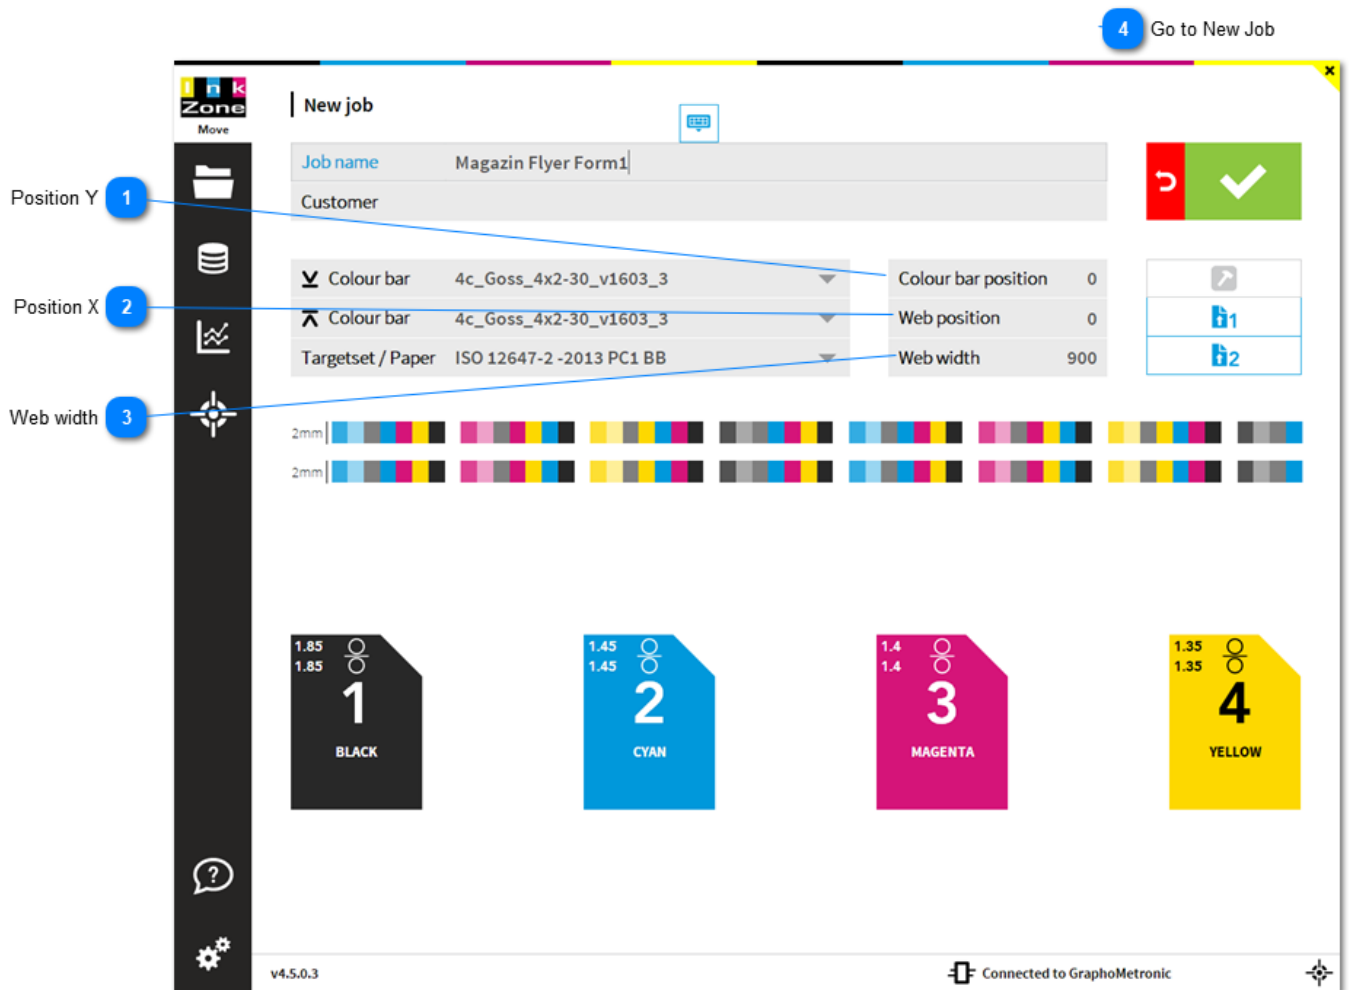

4 XY Sample

See detailed sample here [1.1.1.2.2. IntelliTrax XY sample](#)

5 Return to New Job

[1.3.2. New Job](#)

1.3.2.3. Graphometric Job Setup

Position Y

Colour bar position 0

Colorbar circumference position, as an offset to the standard calibrated Y position

Position X

Web position 0

Position across the web, roller. Use this parameter when the web is not centered in the press (e.g. shifted by 1 key) or the colorbar itself is not centered.

Web width

Web width 900

1.3.3.3. Export Job Database

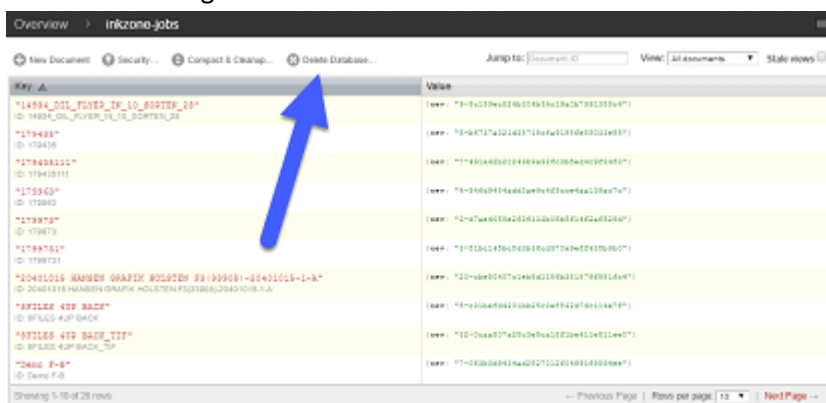

The following procedure describes how to migrate the InkZoneMove job database to another computer:

IZM4 job database migration – move the installation from PC A (source) to PC B (target)

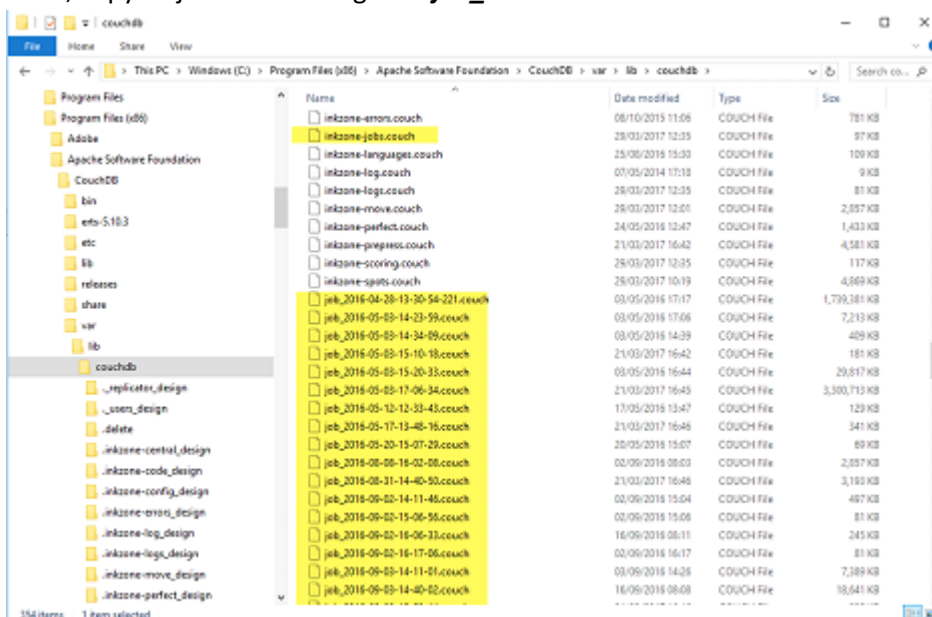

1. Install IZM4 on the target PC
2. On the target system, open http://localhost:5984/_utils/database.html?inkzone-jobs and select **Delete Database** from top commands

User name: inkzone

Password: testing

3. On the source system, go to
 "C:\Program Files (x86)\Apache Software Foundation\CouchDB\var\lib\couchdb" (can be also "C:\CouchDB\var\lib\couchdb") and copy the file **inkzone-jobs.couch**
 Then, copy all job files starting with **job_*.couch**

4. On the target system, open the CouchDB storage folder (same as from point 2) and paste the inkzone-jobs.couch and the job_*.couch files.
5. Start InkZoneMove. All jobs should be fully functional now

1.4. IZReport

InkZone Report is an add-on for InkZoneMove to verify print jobs against a given print standard, print reference. For none InkZoneMove user the application can be configured to process X-Rite SVF data or Scan.XML JDF data.

1.4.1. Setup

InkZone Report uses target and scoring sets for the color assessments. For the report configuration it's important to understand targetset: [1.2.3.3. Edit Targetset](#) and scoring setup: [1.2.5. Scoring Setup](#)

1.4.2. Views

InkZoneReport has different views on job measurement data.

Go to:

Find here a collection of frequently asked questions.

Installation

[Startup error MSVCR100.DLL](#)

[How to migrate the job database to another computer?](#)

[Computer with 2 monitors](#)

Setup

[Send e-mail with Google Mail server](#)

[Exclude paper white patches with Intellitrax](#)

[Shifted ink-key alignment](#)

[Set density threshold to disable ink-key adjustment](#)

How to migrate the job database to another computer?

See here [1.3.3.3. Export Job Database](#)

Computer with 2 monitors

InkZoneMove should appear on the 2nd monitor. How to configure?

Press CTRL + ALT + 2 . Return to monitor 1 with CTRL + ALT + 1

Send e-mail with Google Mail server

a) Setup

Gmail SMTP server address: smtp.gmail.com

Gmail SMTP username: Your Gmail address (e.g. example@gmail.com)

Gmail SMTP password: Your Gmail password

Gmail SMTP port (SSL): 465

If you can't send mail with your Gmail account for that reason, it's unlikely that you're entering the wrong SMTP settings. Instead, you'll get a message related to the security of the email client.

To solve this, log in to your Google account through a web browser and [enable access through less secure apps through this link](#).

If that is not the reason Gmail isn't working in your email client, see [How to Unlock Gmail for a New Email Program or Service](#).

b) Verify SSL connection with OpenSSL for Windows

1. Download OpenSSL for Windows from sourceforge: <https://sourceforge.net/projects/openssl/>

2. Copy folder OpenSSL to c:\OpenSSL

3. Start openssl.exe from C:\OpenSSL\bin

4. Connect to the smtp server:

OpenSSL> s_client -connect smtp.gmail.com:465 -crlf

The complete procedure is described here: <https://taufanlubis.wordpress.com/2016/02/08/how-to-send-email-via-gmail-server-using-openssl/>

page 241/246

Exclude paper white patches with Intellitrax

Certain papers types can cause an incorrect reading of the leading paper white area on the sides of the colorbar. The sample below shows a paper white patch at the end of the measured colorbar which should be excluded.

There is a **L threshold** setup to exclude such patches on both sides of the colorbar.

Open the database with this link:

http://localhost:5984/photon/_design/photon/index.html#inkzone-central/instrument_SpectroDens

Go to the entry and change:

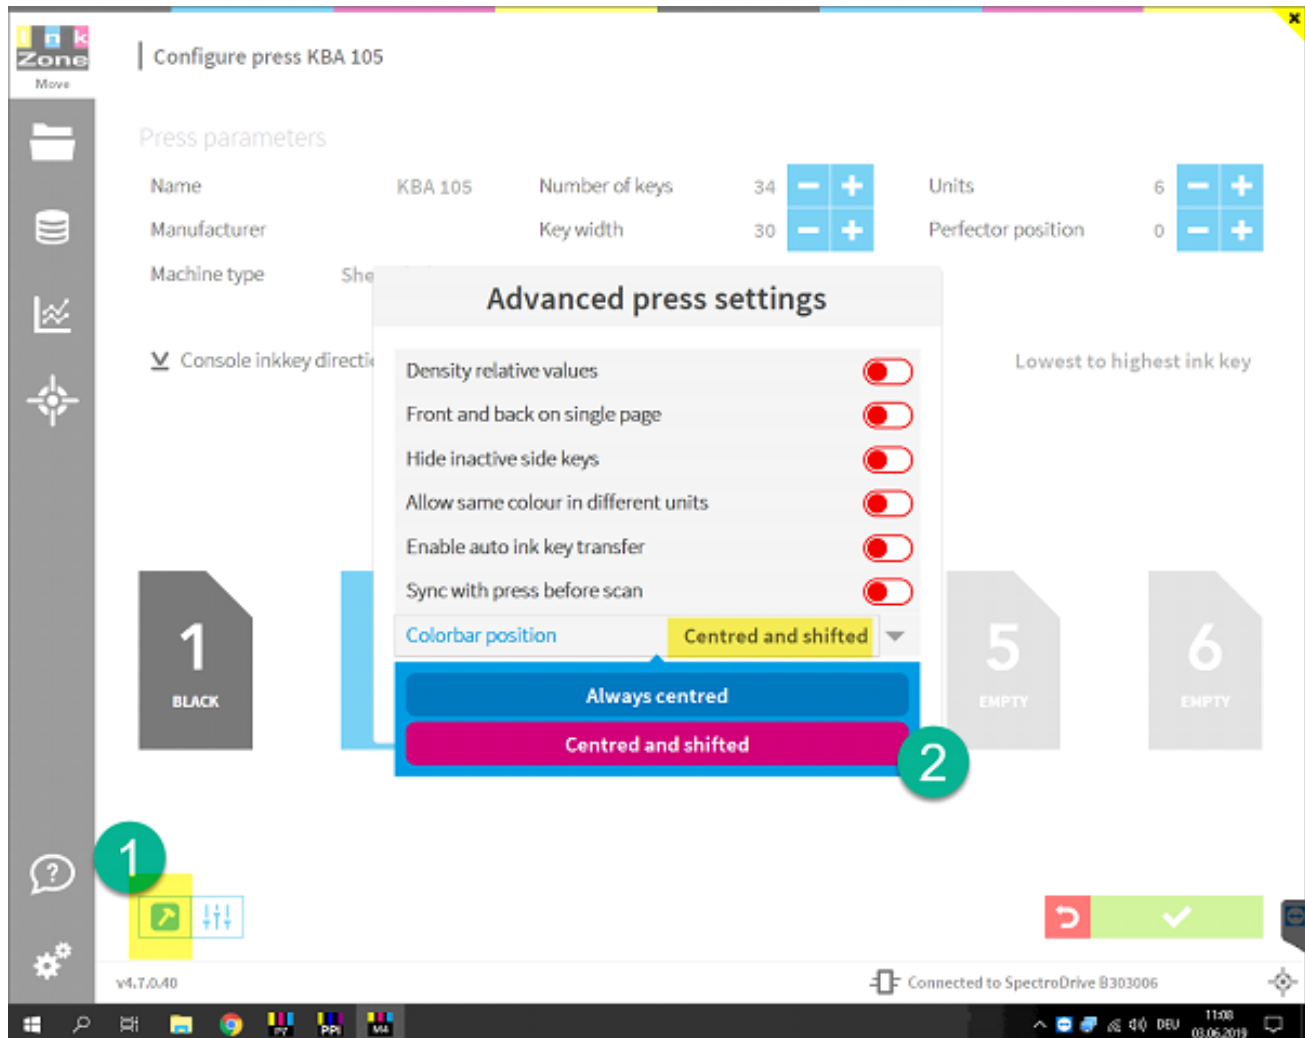

First_bad_patches_L_min

First_bad_patches_L_max

Shifted ink-key alignment

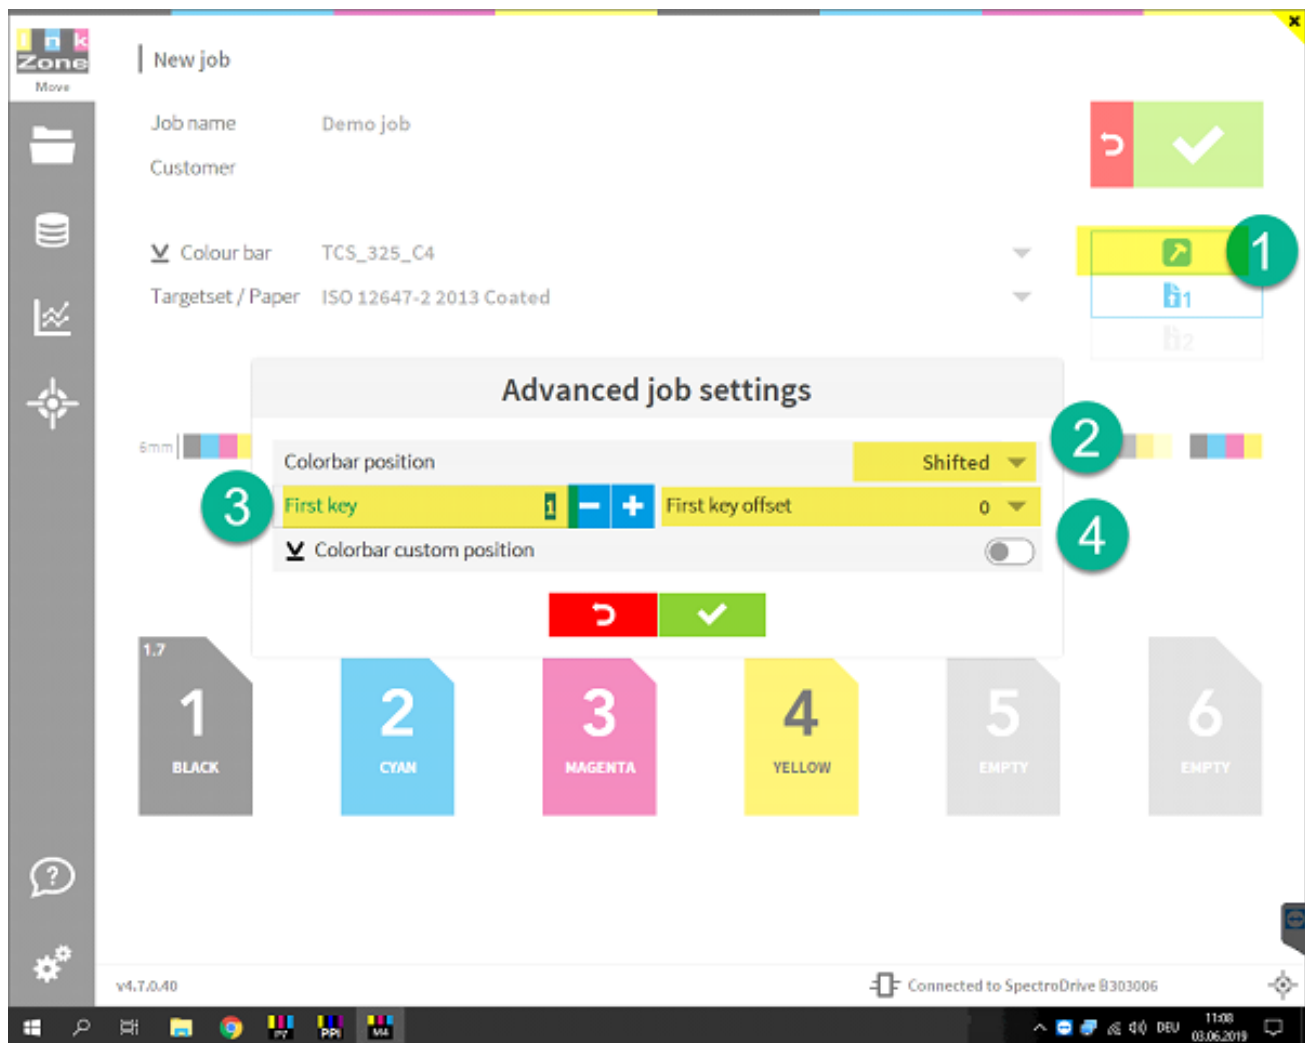

Use the following setup parameters when the colorbar is not printed centred over press machines ink-keys.

1) Setup press with “shifted” ink-key alignment

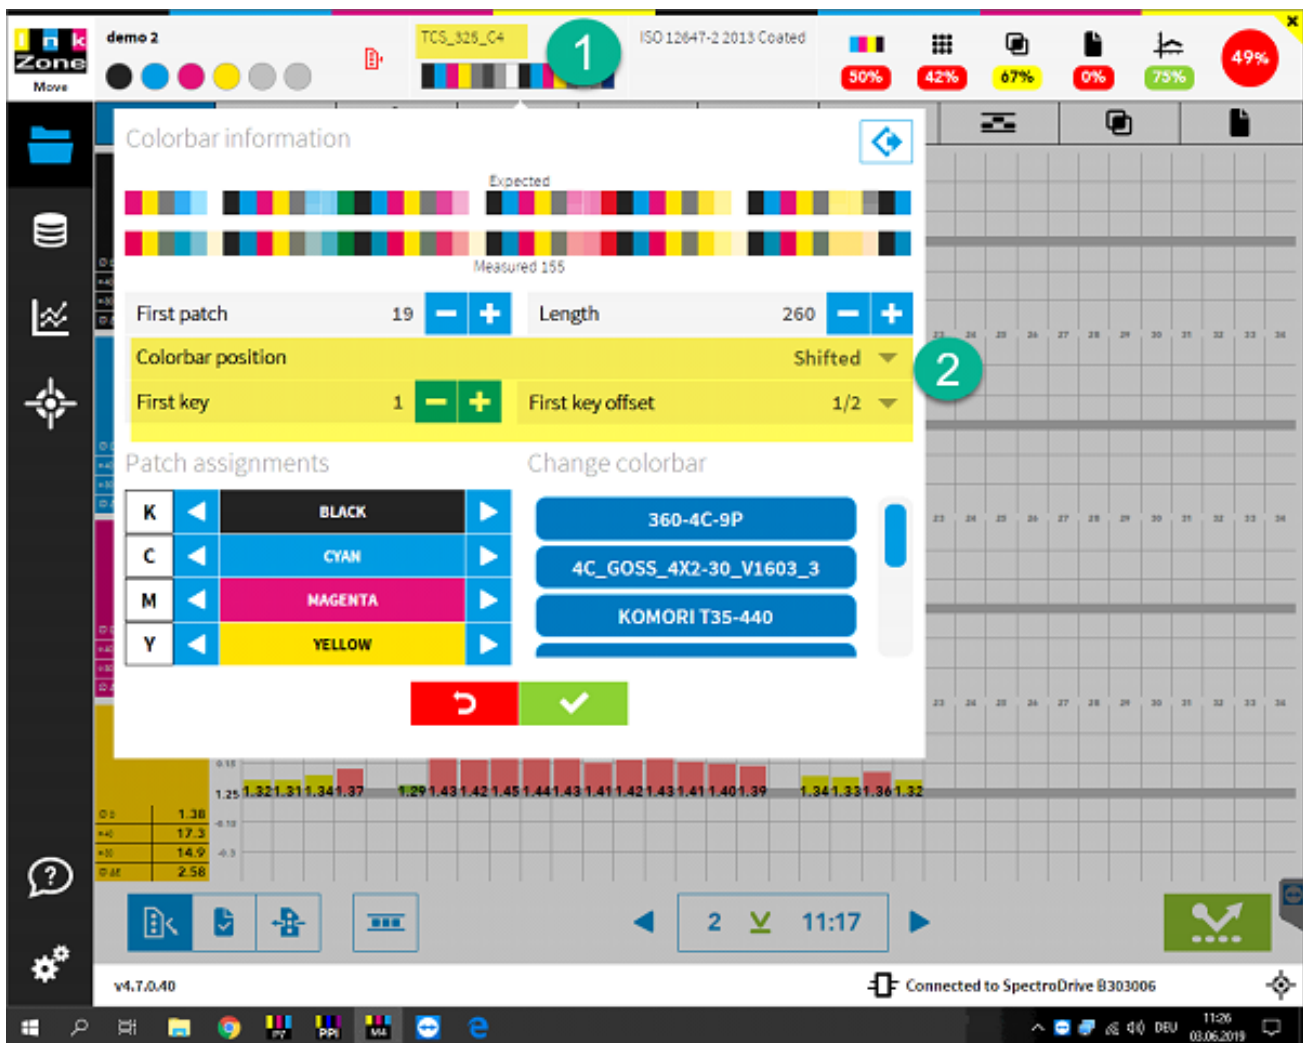

- 1) Advanced press settings
- 2) Choose centred and shifted

2) Job setup

- 1) During job setup, choose extended job setting.
- 2) Select shifted
- 3) Select the ink-key number where the color bar starts
- 4) Select an offset of 0 or 1/4 or 1/2 or 3/4 within the selected ink-key (selected at 3)

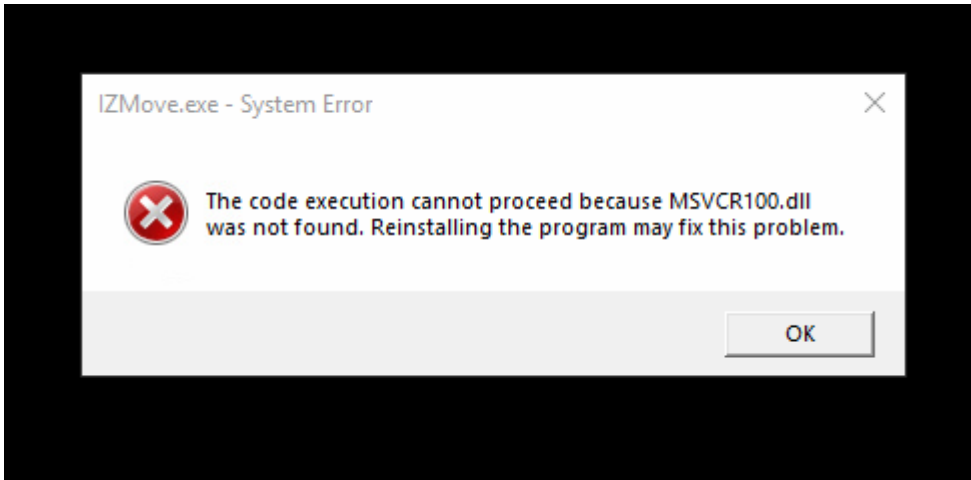

3) Change colorbar parameter during print

- 1) Select colorbar menu
- 2) Set-up the colorbar positioning parameter

Startup error MSVCR100.DLL

The X-Rite eXact DLL requires a DLL from the Microsoft Visual C++ 2010 Service Pack 1. If the DLL is missing, InkZoneMove throws an error during startup:

Update or install the DLL from the Microsoft website, [click here](#).

Prevent ink-key adjustment with a density threshold parameter

Go to the InkZoneLoop setting in the system setup: [1.2.7. System Setup](#)
