1.1. Home

1

Job history

After program start, InkZone welcomes the user on this page. It shows the last transferred job to press and the previously printed jobs.

Simply click on the InkZone icon to return to this page

2

Current job

MOONDUST
ELECTRONICS_650X460_TL
105987__305216

05/27/2021 19:08:04

The large preview indicates the current job. It's the last job transferred to press.

3 Printed jobs

A job list with previously printed jobs, showing a job preview, job name and the date.

4 Press view IZ

Select the icon to change to the press data view.

Go to press view: [1.4. Press view](#)

5 Navigation panel

From the panel change to the calibration curve manager, the software setup, job list view and press view.

6 Press connection

The icon shows the enabled InkZone press connection module. The driver communicates to the InkZone hardware module which is connected to the press console. Certain press connection require a second press connection module when color-control is enabled.

7 Dongle ID

The InkZone dongle ID.

Software version

1.2. Job list

The screenshot shows the 'Select jobs' interface in InkZone. On the left is a sidebar with icons for various functions, numbered 1 through 11. On the right is the main job list area, with a 'Go to Press preparation' button at the top right numbered 12. The job list contains two entries:

Status	Preview front	Preview back	Job name	Date	Colors	Status	Actions
CIP3/4			14934_DIL_FLYER_IN_1 0_SORTEN	27/05/2021 22:27		CIP3/4	
			8FILES 4UP	27/05/2021 22:27		CIP3/4	

At the bottom, there is a 'Remove' button (red X) and a 'Go to Press preparation' button (green play icon). The status bar at the bottom shows 'v8.0.117.2' and '3257'.

1

Search

Start searching for jobs from here. Type a part of the job name and hit enter to view the search result. The background of the search term changes to green when a search is active. Reset the search with the red X button.

Active search:

2

Customized search

User customized search buttons to configure repeating search patterns. Go to customized search: [1.2.4. Customized job search](#)

3

Manage search

Create a customized search based on name, date and status and connect them with AND and OR.

Go to customized search: [1.2.4. Customized job search](#)

4

Job list

View the job list.

5

Filter on status

Status

Filter the job list by job status.

See job filter: [1.2.2. Job filter](#)

6

Filter on date

Date

Filter the job list by date.

See filter by date: [1.2.3. Date filter](#)

7

Job information

Preview F	Preview B	Job name	Date	Colors	Status	Delete	Add to preparation

Return to job list

[1.2. Job list](#)

1.3. Press preparation

1 Edit

Job name 14934_DIL_FLYER_IN_10_SORTEN_2_B

Job name. Can be modified here.

2 Reset

Clear the current color to press unit assignment

3 Job information

Job information. Drag and drop from here a color to the press unit. C M Y K colors are automatically assigned to the unit defined in the press setup. A spot color is typically assigned by selecting drag and drop.

4 Assign to press

Assigns C M Y K, the process colors, to the press units. The standard color to unit assignment from the InkZone press setup is used.

5 Ink-key profile

Preview of the ink-key profile and the raw plate coverage.

6 Absolute ink-key change

Increase and decrease ink-key values absolute.

7 Relative ink-key change

Increase and decrease ink-key position relative.

8 Ductor / Sweep

Increase and decrease ductor / sweep in absolute mode

9 Press setup

Selected ink assignment.

10 Curve name

Active paper calibration curve, used for the ink-preset.

11 Apply curve

By default, the button is in mode apply calibration curve to ink-coverage. The ink-key profile shown above is the data to be transferred to press.

Toggle with the button between plate coverage and ink-key profile data.

Apply curve active: shows ink-key profile for press

Apply calibration curve not active: shows plate coverage

12 Transfer to press

Transfer job to the press console.

13 Go to Job list

[1.2. Job list](#)

14 Perfecting press

See the job setup for a perfecting press here: [1.3.2. Perfecting job](#)

1.3.1. Reprint job

1 Edit

Job name 0484-0535BUEHNER.NEW.1A-nr2

Job name from archive. If required, change job name here.

2 Archive indicator

Job is archived indicator. Job is printed and received final ink-key position from press console.

3 Reset

Reset the color to unit assignment

4 Reuse archived data

Use the ink-key profile from the archived job.

5 Apply curve

Instead of using the ink-key profile from the archive, apply a calibration curve to the plate coverage data.

1.3.2. Perfecting job

Job preparation Job name 14934_DIL_FLYER_IN_10_SORTEN

5 Go to Perfecting press

Activated press

Name	Offset Press 6 units	Number of keys	23
PressID	1	Keywidth	32.5
Machine type	Sheet-fed	Units	6
Manufacturer		Perfector after unit	0

Color bars: 1 BLACK, 2 CYAN, 3 MAGENTA, 4 YELLOW, 5 EMPTY, 6 EMPTY

Version: v8.0.111.20 3257 IZLoopConnect

1 Advanced settings

See here: [1.7.1.1. Advanced features](#)

2 Unlock - lock

To modify the press setup, press the unlock button.

When this icon is visible, the press parameter can not be changed. The setup is locked.

1) When this icon is visible, press parameter editing is enabled.

2) Change from here to the advanced press settings.

3) Cancel, all changes are discarded.

3

Press setup

Name	Offset Press 6 units	Number of keys	23	–	+
Press ID	1	Key width	32.5	–	+
Machine type	Sheet-fed ▼	Units	6	–	+
Manufacturer		Perfector after unit	0	–	+

Press machine parameter

4

Color setup

Default color sequence for K C M Y colors. Change the sequence by clicking on the unit and select a color.

5

Go to Perfecting press[1.7.1.4. Perfecting press](#)

1.7.1.1. Advanced features

1 Side ink-key management

Side ink-key control

Allows the operator to setup the ink-key opening of the side ink-keys with an arbitrary value.

- 1) Automatic needs to be disabled
- 2) Define the ink-key opening value
- 3) Define the number of side keys. E.g. a value 2 sets ink-key nr 1 and 2 plus the last two ink-keys as side ink-keys.

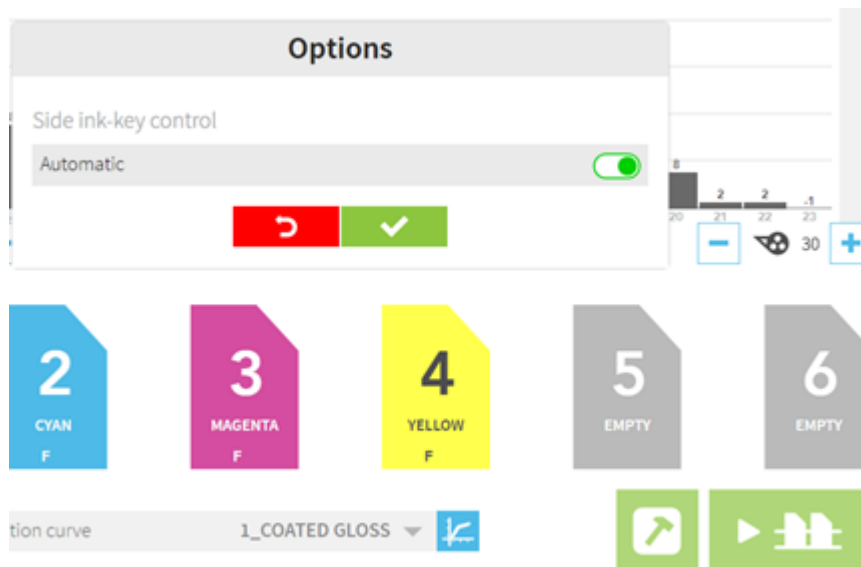

2 Side ink-key value

Side ink-key value for automatic setup

The side ink-keys are automatically set to selected value.

In the press preparation screen, enable through the advanced button, left hand side of the transfer button.

3

Ink-key profile smoothing

Ink-key profile smoothing level

Smoothing is applied to the ink profile.

4

Console ink-key range

Console ink-keyboard scale is 250 (MAN)

Typically, the feature is enabled for MAN consoles where the ink-keys are set between 0 and 250.

5

Reverse perfecting

Reverse perfecting

To assign the F side ink-preset data to the units after the perfector.

6

Job side indicator

Job side indicator

Change the indicator of the front and back side:

F/B

A/B

1.7.1.2. Side ink-key management

1

Automatic

Automatic

When enabled, the side keys are defined by the zero ink coverage on both sides. These keys are set with the value defined in the press setup.

2

Side ink-key value

Set ink-key opening

10

Setup the fixed value for the defined side ink-keys. The value 0 closes the side ink-keys.

3

Define side ink-keys

Side ink-key control

2

Define the number of ink-keys on the left and right side to be treated as side ink-keys.

4

Ink-key treated - right side

Side ink-key on the right side. In this sample key nr22 and nr23 are set to 0.

5

Ink-key treated - left side

Side ink-key on the left side. In this sample key nr1 and nr2 are set to 0.

6

Advanced setting

Select the advanced setting and set the side ink-keys.

See here: [1.7.1.1. Advanced features](#)

1.7.1.3. Ink-key profile smoothing

When smoothing is active, the ink-key value is adjusted with the values from the neighbor ink-keys. See here the same job with different smoothing levels applied:

1

Smoothing - off

No smoothing is applied. Ink-key values are calculated by the calibration curve.

2

Smoothing - level 1

Smoothing level 1. Ink-key values are calculated by the calibration curve and the neighbor ink-keys. With level 1, the influence of the neighbor ink-keys is small.

3

Smoothing - level 2

Smoothing level 2. Ink-key values are calculated by the calibration curve and the neighbor ink-keys. With level 2, the influence of the neighbor ink-keys is medium.

1.7.1.4. Perfecting press

Activated press

Name	Offset Press 6 units	Number of keys	23	-	+
Press ID	1	Key width	32.5	-	+

1.7.4. InkZoneLoop settings

The screenshot shows the InkZoneLoop settings interface. The top bar includes 'Printing conditions' and 'Connected modules'. Below this are tabs for 'PRESS CONNECTIONS', 'IZLOOP', and 'SYSTEM'. The left sidebar has four main sections: 'Density tolerance' (1), 'Regulation setup' (2), 'Advanced setting' (3), and 'Regulation sets' (4). The 'Density tolerance' section contains buttons for 'Density tolerance', 'MakeReady regulation', 'Print regulation', and 'Advanced'. The 'Regulation setup' section contains buttons for 'MakeReady regulation' and 'Print regulation'. The 'Advanced setting' section contains a button for 'Advanced'. The 'Regulation sets' section contains a button for 'Regulation sets'. The main area displays a table of settings for different colors.

	Threshold		Density tolerance		Minimum key opening
	Low key	High key	Low	High	
Black	8	15	0.05	0.05	3
Cyan	8	15	0.05	0.05	3
Magenta	8	15	0.05	0.05	3
Yellow	8	15	0.05	0.05	3
spot	8	15	0.05	0.05	3

The bottom status bar shows 'v8.0.92.0 3257' and 'IZLoopConnect' with a UK flag icon.

1

Density tolerance**Density tolerance**

Cyan	8	15	0.05	0.05	3
Magenta	8	15	0.05	0.05	3
Yellow	8	15	0.05	0.05	3
spot	8	15	0.05	0.05	3

v8.0.94.0 3257 IZLoopConnect

1

Low and High ink-key

Threshold	
Low key	High key
8	15

Definition for Low-key , High-key and transition ink-key range. Each range holds the parameters for:

- Density tolerance
- Minimum ink key opening
- Regulation constant MakeReady Mode
- Regulation constant Print Mode
- Over inked compensation MakeReady Mode
- Over inked compensation Print Mode

2

Density tolerance

Density tolerance	
Low	High
0.05	0.05

When the measured density is out of the density tolerance value, InkZoneLoop applies the correction to reach the target density.

Therefore, an ink-key within the tolerance is not regulated.

3

Minimum openingMinimum key
opening

3

Minimum opening of an ink-key during color-control. The opening value is respected even though the density for this ink-key is too high (regulation down).

4

Find here a collection of frequently asked questions.

Installation topics

[InkZonePerfect - ink-preset](#)

[InkZonePerfect with InkZoneLoop - ink-preset and color-control](#)

[Multiple IZ installs - share job database](#)

Configuration topics

[JDF export - setup](#)

Installation steps "ink-preset" only

1. Install the unified InkZone installer [download link for Unified InkZone installer](#)
2. Run the InkZonePerfect8 installer
3. Run the sentinel dongle driver setup from "[C:\Program Files \(x86\)\DI\InkZonePerfect8_DONGLE DRIVER](#)"
4. Start the program and install the license, see [License loader](#)
5. Configure press setting, see [press setup](#)
6. Configure press connection settings, see [press connection](#)
7. Start InkZone and configure the XMLConnector, the import module for XML/PNG data, see [XMLConnector setup](#)
8. Import print targetsets and link them to the calibration curve, see [Import targetset](#)
9. Finish

Installation steps "ink-preset and color-control"

1. Install the unified InkZone installer [download link for Unified InkZone installer](#)
2. Run the InkZonePerfect8 installer
3. Run the sentinel dongle driver setup from "[C:\Program Files \(x86\)\DI\InkZonePerfect8_DONGLE DRIVER](#)"
4. Start the program and install the license, see [License loader](#)
5. Configure press setting, see [press setup](#)
6. Configure press connection settings, see [press connection](#)
7. Start InkZone and configure the XMLConnector, the import module for XML/PNG data, see [XMLConnector setup](#)
8. Import print targetsets and link them to the calibration curve, see [Import targetset](#)

When used with InkZoneMove:

9. Activate InkZoneMove in [advanced settings](#) of InkZoneLoop
10. Start InkZoneMove and select in the press configuration the press created in InkZonePerfect
11. Link the targetset to the calibration curve from InkZonePerfect
12. Activate InkZonePerfect and InkZoneLoop in the system setup of InkZoneMove

When used with 3rd party scanning software:

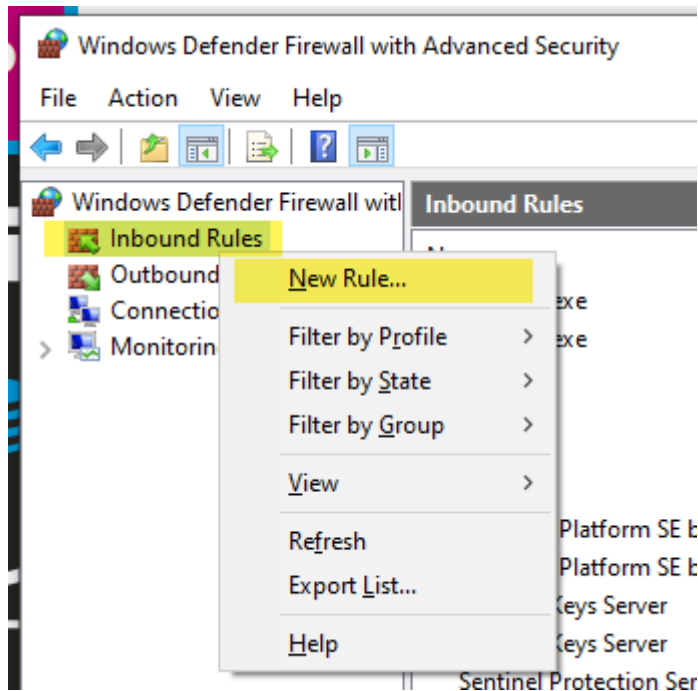

9. Activate IZCockpit in [advanced settings](#) of InkZoneLoop
10. Install IZCockpit
11. Configure IZCockpit, select the hotfolder input folder for the export data SVF, XML etc
12. Configure the 3rd party software to export their scan data to the hotfolder created at #11

Multiple IZ installs - share job database

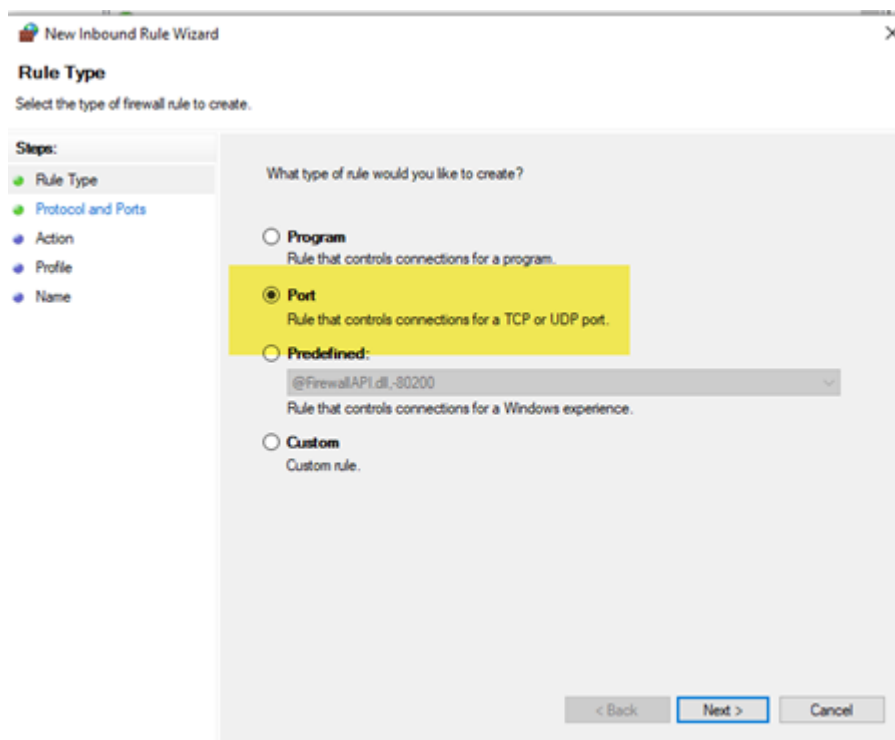

In an press room where two ore more identical presses (same size and number of ink-keys) are running, the sharing of the InkZone prepress job database becomes mandatory.

On all the InkZone PCs, open the port 5984 in the firewall setup:

JDF export - database settings

The JDF export from InkZone creates a job preparation setup file for Techkon ExPresso and X-Rite scan software.

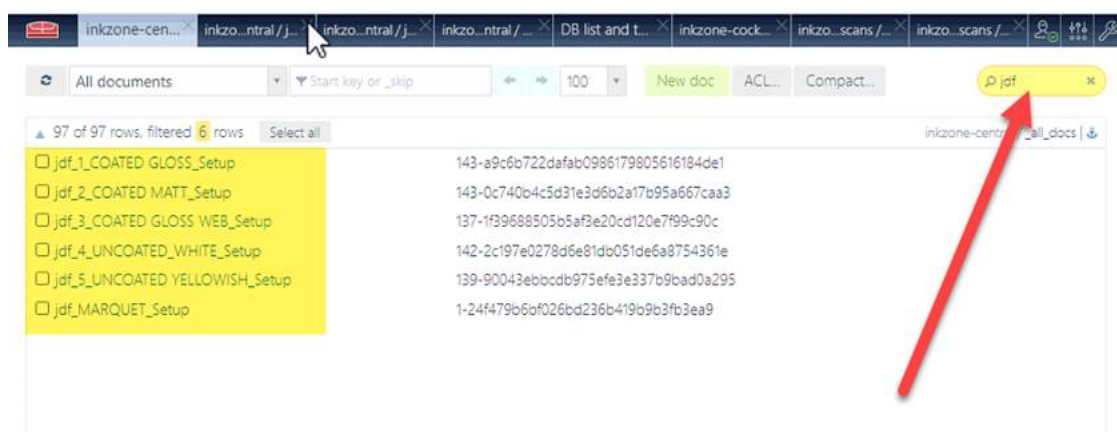

Note

From InkZone version 8.0.127 onwards, the JDF parameters can be setup in the calibration curve setup:

The manual setup (legacy):

1. Go to the database and login with inkzone / testing:
http://localhost:5984/photon/_design/photon/index.html#inkzone-central
2. Look for the database document starting with JDF. Apply a search like:

3. Edit the entries for the Paper and Black, Cyan, Magenta, Yellow and the spot color setup:
 - a) Color name within the JDF. It's the color name expected by X-Rite or Espresso software
 - b) Colorbook name
 - c) Lab values

Sample Espresso 4.2:

4. Edit the entries for the colorbar name and the scan instrument setup setup:
 - d) Colorbar front and colorbar_back
 - e) Instrument parameter settings

5. Store the changes

6. Enable JDF creation in IZLoop setting. Select the JDF export path:
